## Chapter 1 Introduction

---

The MRX920™ is a compact, portable, mobile data collection device used for meter reading of Neptune radio frequency (RF)-equipped water meters. It is used in conjunction with the MX900 host software to conduct automatic meter reading. The data collected is then communicated to the utility's billing system.

**Figure 1.1 MRX920 Receiver**

The MRX920 provides the meter reading industry with many advantages over current meter reading methods:

- Suitable for any size utility
- Portable and easy to set up
- Significantly reduced man-hours needed to collect readings
- Maximized meter reading success rates
- Improved meter reading accuracy
- Access for meters that are “hard-to-read” or “dangerous-to-read”
- Increased safety and minimized liability exposure

The MRX920 is only to be used for in-vehicle purposes.

## System Operations

Operators use the N\_SIGHT™ R900® host software to make route assignments for meter readers. The routes to be read are obtained from the utility billing system and placed on a USB flash drive or accessed by use of a WiFi connection for the meter readers. Routes are loaded into the MX900 host software. Each meter reader drives through the assigned routes to collect data broadcast by R900® meter interface units (MIUs). When complete, the meter readings can be uploaded to the N\_SIGHT R900 host software. The host software transfers the customer information to the billing computer to generate customer bills. See Figure 1.2.

### System Overview

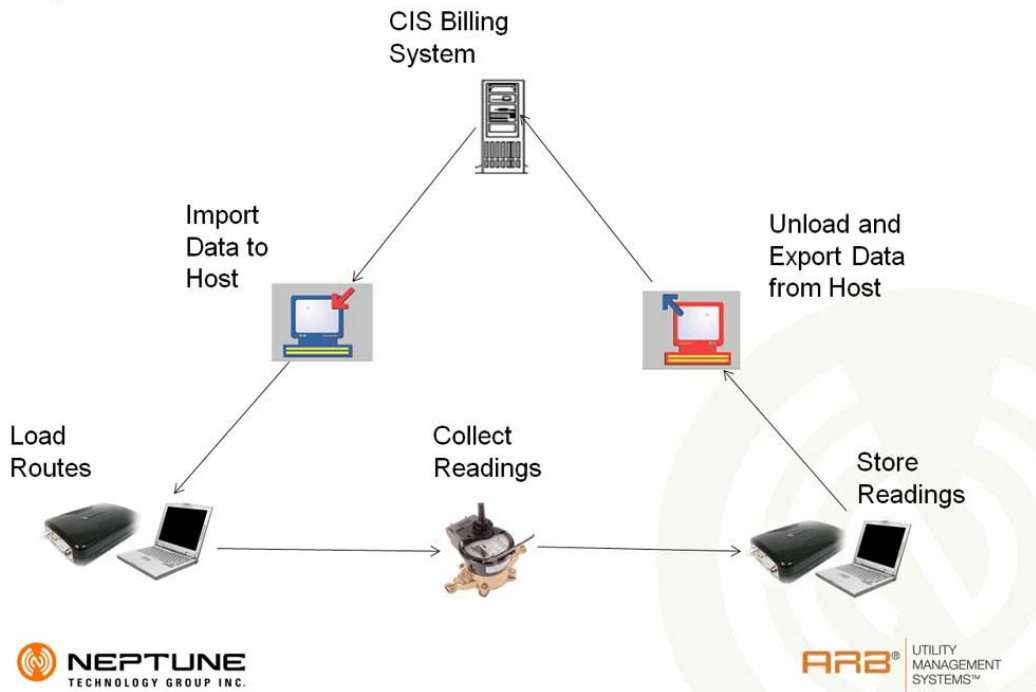

Figure 1.2 MRX920 Meter Reading Operations

---

## About This Manual

The *MRX920 User's Manual* describes the system and its features. This manual also provides procedures on how to set up the MRX920, use its MX900 host software, exit, and close the unit. This manual contains the following chapters:

Chapter	Title	Description
2	Specifications	Provides a section that includes all product specifications, including dimensions, weight, and environmental conditions.
3	Getting Started with the MRX920	Describes hardware setup instructions, power and antenna connection, and instructions on how to turn on the laptop computer. The chapter also includes information on how to adjust system settings including keyboard backlighting, display intensity, and the beeper settings. It also provides steps for installing and updating the software.
4	Using the MRX920	Explains how the product works, procedures for reading meters, reviewing account information, reading missed meters, using the data logger, using the mapping feature, and exiting the software.
5	Troubleshooting	Provides diagnostics procedures for troubleshooting MRX920 problems.
Appendix A	MRX920 Legacy Operations	Provides steps for using the legacy MRX920 and laptop, plus a reference for the laptop keyboard and the LED activity and power indicators.

---

## Conventions Used in this Manual

This manual uses the following icons and typographical conventions to identify special information.

The Warning icon identifies actions that can cause injury to the user or permanently damage the product.

The Caution icon identifies important information that is critical to ensuring that data stored with the MRX920 is not lost.

The Note icon identifies information that clarifies a point within the text.

All small caps

Refers to keys. Examples: ENTER, ALT, TAB

All bold initial caps

Refers to field names, menus, buttons, and menu options. Example: **Device** field or **File** menu.

+ between keys

Refers to pressing the keys at the same time. Example: ALT+B

---

## Product Support within North America

Neptune offers various methods to receive high-quality, responsive Customer Support. However, before contacting Neptune, it is important that you know the version number of the host software that your MRX920 uses. This information is useful to the Customer Support Specialist who addresses the call.

To find the version number of MX900 host software, you must display the System Check window. For instructions on obtaining the version number of the MX900 host software, see “Performing Diagnostics,” on page A-23.

---

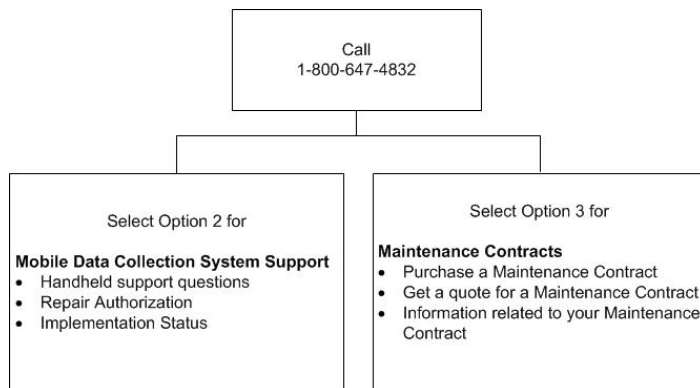

## Contacting Customer Support

Within North America, Neptune Customer Support is available Monday through Friday, 8:00 AM to 7:00 PM Eastern Standard Time by telephone, email, or fax.

To contact Customer Support by phone, call (800) 647-4832. You will be directed to the appropriate team of Customer Support Specialists. These specialists are dedicated to assisting you until the issue is resolved to your satisfaction. When placing a call, be prepared to give the following information:

- The exact wording of any message that appears on the screen of the laptop
- A description of what happened and what you were doing when the problem occurred
- A description of how you tried to solve the problem
- Your utility's name

You will be directed according to the options in Figure 1.3

**Figure 1.3 Support Options**

To contact Customer Support by fax, send a description of your problem to (334) 283-7497. Please include on the fax cover sheet the best time of day for a Customer Support Specialist to contact you.

To contact Customer Support by e-mail, send your letter to the following address: [hhsupp@neptunetg.com](mailto:hhsupp@neptunetg.com).

## Chapter 2      Specifications

---

This chapter provides product specifications, including dimensions, weight, and environmental conditions for the MRX920.

---

### Environmental Conditions

**Table 2.1   Environmental Conditions**

Operating Temperature	32° to 122°F (0° to 50°C)
Storage Temperature	-40° to 185°F (-40° to 85°C)
Operating Humidity	5% to 95% non-condensing relative humidity

## Dimensions and Weight of the MRX920

The MRX920 is light in weight and compact in size. Refer to Table 2.2 and Figure 2.1 for the dimensions and weight of this unit.

**Table 2.2 Dimensions and Weight of the MRX920**

Dimensions	Refer to Figure 2.1, measurement in inches
Weight	Approximately 5.0 pounds (2.27 kg.)

**Figure 2.1 MRX920 Dimensions**

## Hardware Requirements

In order to adequately run the MX900 host software, the laptop you use must meet the following minimum specifications:

**Table 2.3 Hardware Requirements**

<b>Processor</b>	Intel Pentium Processor 1.7 GHz
<b>Operating System</b>	One of the following operating systems is required: <ul style="list-style-type: none"> <li>• Windows XP Professional (32 bit, service pack 3)</li> <li>• Windows Vista Business (32 bit, service pack 1)</li> <li>• Windows 7 Professional and Home Premium (64 bit)</li> </ul>
<b>Memory</b>	1GB expandable to 2GB
	<p>The MRX920 is a mobile data collector designed to be used in a vehicle designated for meter reading. It has been constructed to be used occasionally on a bumpy terrain found in rural meter reading routes. This needs to be considered when choosing a laptop to use with the MRX920. Should your utility operate the MRX920 in bumpy conditions or should you require a display rated for outdoor visibility, Neptune recommends considering a ruggedized laptop such as a Panasonic Toughbook® or equivalent.</p> <p>Neptune recommends one of the following:</p> <ul style="list-style-type: none"> <li>• Cigarette lighter adapter, required for laptop.</li> <li>• Extended life battery</li> </ul>
<b>Display</b>	12.1" XGA (800 x 600)
<b>Keyboard</b>	89-key
<b>Communication</b>	Internal 802.11b/g wireless LAN (if wireless loading/unloading is desired), WiFi 802.11, GPS Receiver (if GPS location tracking is desired).
<b>Interface</b>	USB 2.0, PS/2, RJ-11, RJ-45 (Ethernet LAN), VGA
<b>Durability</b>	Meets the recommended MIL-STD 810F

Two important considerations:

- The MRX920 does NOT supply power to the laptop.
- However, for its own use, the MRX920 draws less than 1 amp of power.

*Notes*

## Chapter 3      Getting Started

---

This chapter provides an overview of the MRX920 along with software installation and hardware setup instructions including power and antenna connection. This chapter also includes information on how to adjust system settings including keyboard backlighting, display intensity, and the beeper settings.

---

### MRX920/MX900 Overview

The MRX920 is a portable, mobile data collection device. It is used in conjunction with internal software, a laptop computer, and the MX900 host software to conduct automatic meter reading. The data collected is then communicated to the utility's billing system.

The MRX920 features the following:

- Durable construction in a compact design for everyday use in any vehicle
- Optional Map view with GPS capability
- Available WiFi connection to most laptops
- Audible tone sounds to indicate successful readings
- Wireless loading and unloading
- Ability to read R900 radio transmitters
- Captured reads stored to the hard drive of the laptop

---

## MRX920 Features

The MRX920 consists of a data collection receiver/processing unit and the user's laptop computer for use in meter reading. See Figure 3.1. The unit features meter reading software designed for simplified route collection.

Figure 3.1 MRX920 Receiving/Processing Unit

**Attempting to repair or modify the unit on your own can result in personal injury or damage to the unit and will void the warranty.**

## WiFi/USB/Serial Support

The MX900 host software supports WiFi and USB connection to the current receiver as well as a serial port connection for the legacy model receiver.

### WiFi Support

The MX900 host software supports a TCP/IP connection. The MX900 host software bonds to one MRX920 through its Media Access Controller (MAC) address. Only one MRX920 at a time can be bonded to the MX900 host software/PC.

### USB Connection

The MX900 host software supports a virtual serial port over USB. Neptune's driver maps the USB device on the MRX920 to a virtual communications port. The MRX920 must be plugged into PC via USB cord in order to install USB driver.

During the installation, prompts provide a warning indicating that the driver is not Windows certified.

### Serial Connection

The MX900 software is able to connect to the legacy MRX920 through a serial port connection.

To set up one of these connections, refer to “Setting Up the Connection,” on page 3-15.

## The Laptop

One of the available options when purchasing the MRX920 is to purchase the receiver by itself. This allows you to utilize an existing laptop hardware that may already be installed in the utility vehicle. This section guides you through setting up the MRX920 with a third-party laptop. The laptop will need a car charger or power inverter in order to be charged in the vehicle while reading.

Neptune is not responsible for issues with any laptops not provided by Neptune and does not warranty, support, or repair laptops not provided by Neptune.

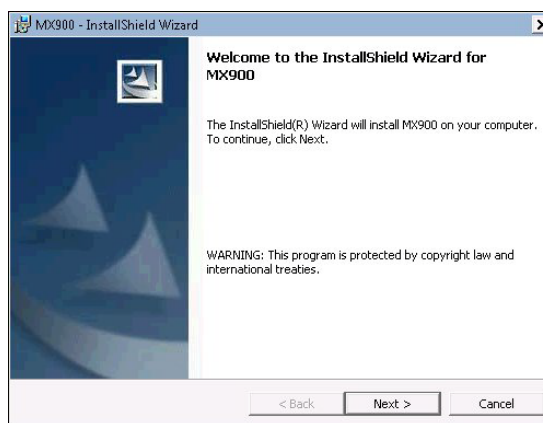

---

## Host Software Installation

To install the MX900 host software, complete the following steps.

- 1 Close all programs before installing the MX900 host software.
- 2 Insert the MX900 host software installation CD into the CD-ROM drive of the laptop computer designated for use with the MRX920.

The InstallShield Wizard Welcome window appears.

**Figure 3.2** InstallShield Wizard Welcome Window

- 3 Click **Next** to continue.

## If the CD Does Not Start Automatically

- 1 From the Windows Start menu, select **Run**.

The Run dialog displays.

- 2 Click **Browse** and navigate to your CD drive.

- 3 Select  **setup.exe** and click **Open**.

The Run dialog displays x:\setup.exe where x is the drive letter of the CD drive.

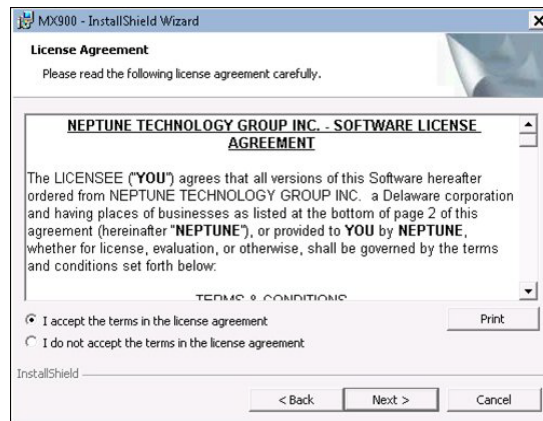

- 4 On the Run dialog, click **OK**.

The InstallShield Wizard Welcome window appears. See Figure 3.2 on Page 3-4.

- 5 Click **Next** to continue.

## Accepting the License Agreement

The Neptune Software License Agreement appears in the installation dialog.

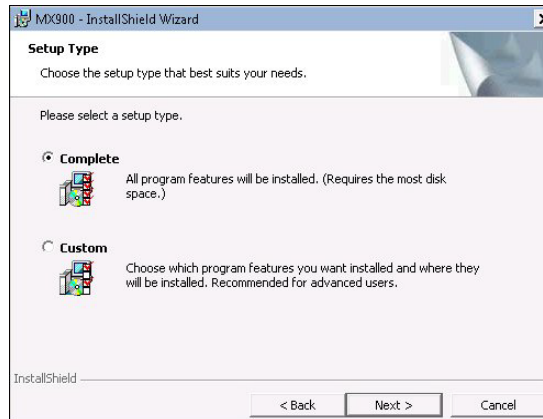

**Figure 3.3 Neptune Software License Agreement**

- 1 Read the license agreement that appears in the dialog.
- 2 Click **I accept the terms in the license agreement**.
- 3 Click **Next** to continue.

## Selecting the Setup Type

The following window appears.

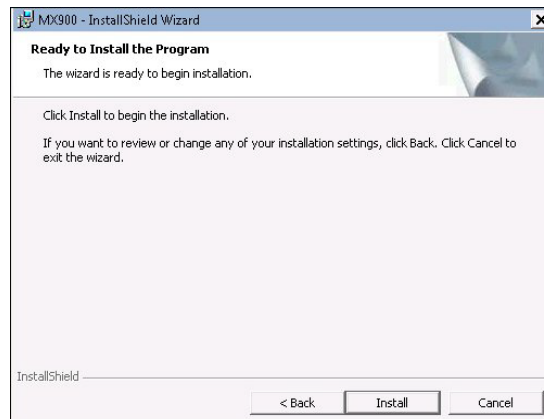

**Figure 3.4 Setup Type Window**

- 1 Do one of the following:
  - Select **Complete** installation to accept the default parameters.
  - Select **Custom** if you wish to change the installation directory.
- 2 Press **Next** to continue.

## Preparing to Install

The following window appears.

**Figure 3.5** Ready to Install Window

Click **Next** to continue.

## For Windows Vista and Windows 7 Users

If you are a Windows Vista or Windows 7 user, a dialog similar to the following may appear.

**Figure 3.6** User Account Control Dialog

Click **Yes** to continue.

## Completing the Installation

The following window appears.

**Figure 3.7** InstallShield Wizard Complete

Click **Finish** to close the InstallShield Wizard.

## For Windows Vista Users Only

For Windows Vista only, complete these additional steps.

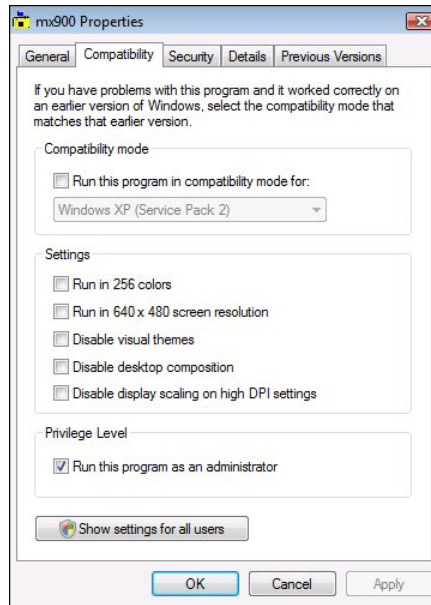

- 1 From the **Start** menu select **Computer**.
- 2 Browse the installation directory for the MX900 host software.

Usually the installation directory is located in C:\Program Files\Neptune\MX900.

- 3 Right-click the **MX900** application and select **Properties**.

The following dialog appears.

**Figure 3.8 Windows Vista Compatibility**

- 4 Select the **Compatibility** tab.
- 5 Check **Run this program as an administrator**.
- 6 Click **OK**.

## Installing the USB Driver

The following steps are for Windows 7 users only.

To install the USB drive, complete the following steps.

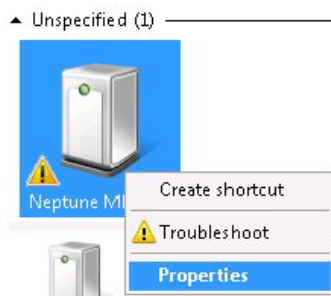

- 1 Be sure your MRX920 is powered from your automobile's cigarette lighter plug.
- 2 Connect the MRX920 to your laptop using a USB cable.

## If Windows 7 Does Not Recognize Driver

If Windows 7 does not automatically prompt you for the device driver, complete the following steps.

- 1 Select **Start**.
- 2 Select **Control Panel**.
- 3 Select **View devices and printers**.
- 4 Scroll down to select **Neptune MRX920**.

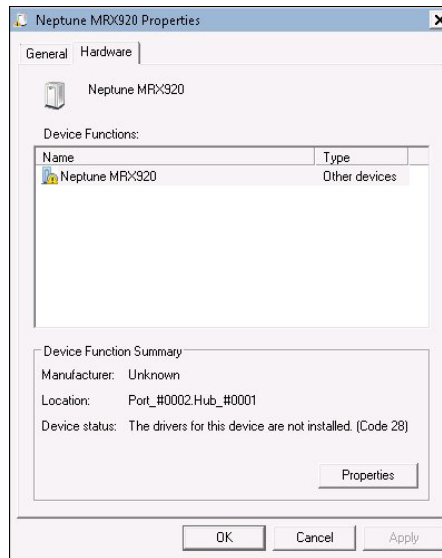

The following dialog appears.

**Figure 3.9** Selecting Neptune MRX920 Properties

- 5 Right-click and select **Properties**.

The following dialog appears.

**Figure 3.10 Neptune MRX920 Properties**

- 6 Select the **Hardware** tab.

The following dialog appears.

**Figure 3.11 Neptune MRX920 Properties General Tab**

- 7 Click .

The following dialog appears.

## Updating the Driver

Complete the following steps.

Figure 3.12 Update Driver Dialog

- 1 Click .

The following dialog appears.

Figure 3.13 Update Driver Software

- 2 Select **Browse my computer for driver software**.

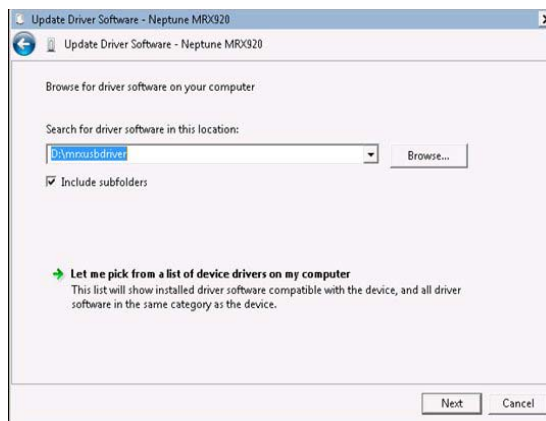

Figure 3.14 Browse for Driver

- 3 Click **Browse** to locate the **mxusbdriver** folder on the installation CD.

The following dialog appears.

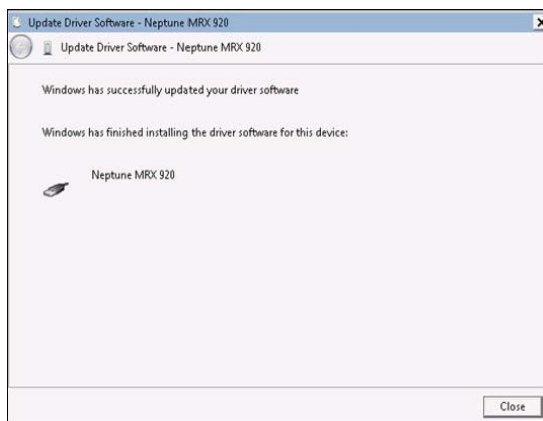

Figure 3.15 Windows Security Dialog

- 4 Select **Install this driver software anyway**.

The following dialog appears.

**Figure 3.16 Update Driver Software Successful**

- 5 Click **Close**.
- 6 Close all dialogs and go back to **Devices and Printers**.

The driver installation is complete.

---

## Setting Up the MRX920

To set up the MRX920, please refer to Chapter 3 of this manual for the following instructions.

- “Plugging in the Power Cable,” on page 3-22.
- “Installing the Antenna,” on page 3-23
- “Inserting the USB Flash Drive,” on page 3-25
- “Starting the Software,” on page 3-26 (Software must first be installed.)

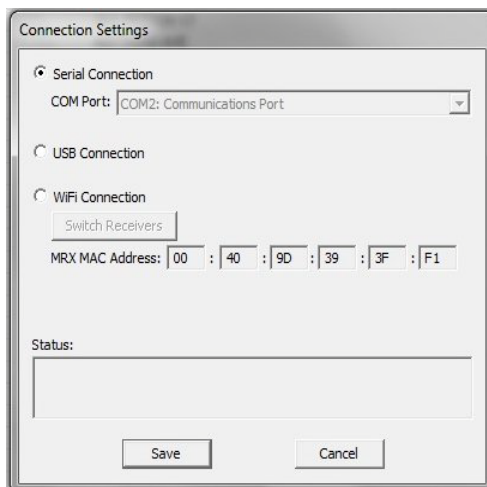

## Setting Up the Connection

To establish a connection between the laptop and the MRX920 receiver, complete the following steps.

- 1 Access the Route Selection window.

- 2 Click  .

The Connection Settings Dialog appears as illustrated in Figure 3.17.

**Figure 3.17 Connection Settings Dialog**

- 3 Select one of the following three methods of connection between your laptop and the MRX920. Once you choose the initial connection, the connection options that are not compatible with your unit appear gray.
- Serial Connection (for use with the legacy MRX920)
  - USB Connection
  - WiFi Connection

## Initial WiFi Connection

In order to connect your MRX920 wirelessly to your PC, you must use the Windows Wireless Connection Manager.

This section will look differently depending on the Operating System that is managing the network connection.

To establish a WiFi connection to your MRX920 for the first time, complete the following steps.

- 1 Make sure you have an existing WiFi adapter.
- 2 Make sure the MX900 host software is installed on the laptop.
- 3 Turn on the MRX920.

When you turn on MRX920, be sure that it is within 10 to 15 feet of the laptop.

- 4 Select the **Route Selection** tab.
- 5 Click .
- 6 Select **WiFi Connection**.
- 7 Select **Switch Receivers**.
- 8 Manually enter the **MAC Address** from the label on the MRX920 or click **Scan** to scan for the MAC address.

If you click **Scan**, the WiFi adapter connects to the MRX920 wirelessly. Wait approximately 90 seconds until WiFi connection is established. Then, click **Scan** again. See Figure 3.18 on Page 3-18.

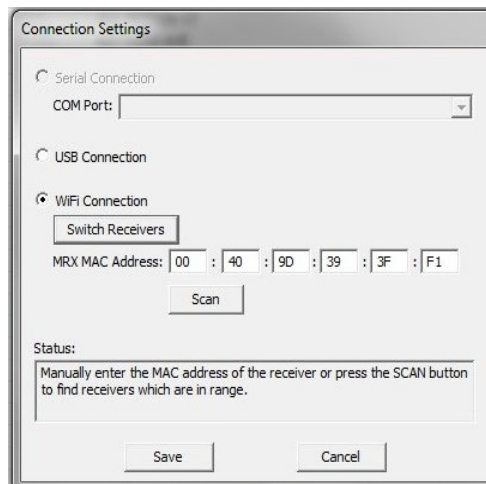

Figure 3.18 MAC Address

If you use **Scan** to select the correct MAC address from the dropdown selection list, click **Select**.

9 Click **Save**.

10 Click  to begin reading the route using the WiFi connection.

## Initial USB Connection

To establish a USB connection for the first time, complete the following steps.

- 1 Turn on the MRX920.
- 2 Using a USB cable, attach the MRX920 to the laptop that is running the MX900 host software.
- 3 If a USB driver has not yet been installed, install the USB driver supplied on the installation CD. See “Installing the USB Driver,” on page 3-9.
- 4 Start the **MX900** host software.
- 5 Select the **Route Selection** tab.

- 6 Click

- 7 Select **USB Connection**.

- 8 Click **Save**.

- 9 Click

to begin reading the route using the USB connection.

For both WiFi and USB connections, the connection to the MRX920 is complete when you click **Read Route** — not when the MX900 host software first starts.

## Verify Connection Setting

To verify the connection method, click the System Check tab. The connection shows as one of the following:

- Serial Connection
- USB
- WiFi

---

## Installing the MRX920 in the Vehicle

With the MRX920, you have flexibility as to where to place the unit, for example, under the seat, in the back seat, and so forth. The most optimum way of using the unit is to place the unit in the passenger seat and fasten the seat belt through the straps on the carrying case, Part No. 13125-001. See Figure 3.19.

**Figure 3.19 MRX920 Placed in Vehicle**

Neptune offers an optional mobile office unit, Part No. 1310A-001, that can help you organize your equipment with a compartment for the MRX920 and a way to secure your laptop. See Figure 3.20 and Figure 3.21 on Page 3-21 for how you can use this unit.

The laptop must be installed securely in a vehicle mount. This protects the driver and equipment should the vehicle be required to come to an immediate stop.

**Figure 3.20 Optional Mobile Office**

The mobile office unit can keep your laptop and MRX920 secure while driving.

**Figure 3.21 Mobile Office in Use**

---

## Plugging in the Power Cable

Complete the following steps to connect the vehicle power supply power cable to the MRX920, and plug it into the vehicle power supply receptacle.

- 1 Start the vehicle.

It is very important to first start the vehicle before connecting the cable.

- 2 Grip the vehicle power supply cable by the black sleeve, not the metal casing.
- 3 Line up the red arrows and insert the power connector until the metal locking mechanism twists and locks into place.

You might need to wiggle the power supply cable a little to get the connector to click.

- 4 After the power supply cable is connected, the red dot and red arrow should align, ensuring you that the cable is connected.

- 5 Insert the appropriate end of the vehicle power supply power cable into the connector on the MRX920, as illustrated in Figure 3.22.

**Figure 3.22 Vehicle Power Supply Power Cable**

- 6 Plug the other end of the power cable into the vehicle power supply receptacle as illustrated in Figure 3.23.

**Figure 3.23 Vehicle Power Supply Cable Inserted In Car**

---

## Installing the Antenna

The proper installation of the antenna cable is critical for the optimal performance of the MRX920. If the cable is crimped, the performance of the unit will degrade significantly.

There are several options for running the cable. Whichever method works best for you depends on the type of vehicle being used. The most important consideration when installing the antenna is for the cable to remain undamaged.

To ensure proper installation of the antenna, complete the following steps.

- 1 Referring to Figure 3.1 on Page 3-2, connect the RF antenna to the MRX920 and hand-tighten the connector by turning it clockwise until it is secured.
- 2 Place the magnetic base of the antenna in the center of the roof approximately one foot (30 cm) behind the leading edge of the roof.

**Figure 3.24 Antenna Installation**

- 3 Route the antenna wire through the passenger window or through the door. See Figure 3.25. To prevent the cable from crimping, use the cable protector as illustrated in the following figure.

**Figure 3.25 Antenna Cable Through Window**

- 4 Use one of the cable protectors (Part No. 12729-001) that are included with the MRX920.

**Caution is necessary to ensure there is sufficient room for the cable and that it does not get crimped.**

In some vehicles, there is enough room to run the cable through the doorframe of the vehicle without crimping the cable. Other vehicles do not always have enough clearance (especially vehicles with rain gutters). Running the cable through a rear door can be an option. You can also run the cable through a window.

- 5 Gently close the window, positioning the antenna cable so there is no pressure on it.

**Pressure on the antenna cable can cause damage.**

---

## Inserting the USB Flash Drive

Neptune recommends that you insert the USB flash drive into the laptop after you place the laptop in the vehicle.

Complete the following steps to insert the USB flash drive containing the routes you plan to read.

- 1 If there is a cover over the USB flash drive, remove the cover.
- 2 Remove the dust cover from the USB port.

Figure 3.26 USB Port and Drive

- 3 Insert the USB flash drive into the port on the laptop.

Be careful not to force the USB flash drive into the slot. Forcing can cause damage to the drive or to the data contained on the drive. If the drive does not insert easily, rotate it 180°, and try to insert it again.

---

## Starting the Software

Complete the following steps to start the software on your laptop.

- 1 Double-click on the  icon on your Windows desktop.

The software automatically attempts to import a route file. When the import process is complete, the Route Selection window appears.

If the route data file is not found, a message displays. See “If Route Data File is Not Found” on page A-25, for instructions.

- 2 Continue to “Using the MRX920” on page 4-1 to begin using your MRX920.

## Installing the Maps Component

If you have purchased the additional Maps component, follow this procedure to install the Maps component.

- 1 Use **Add/Remove** in the **Windows Control Panel** to remove any old version of maps.
- 2 Place the USB drive into a USB port on the laptop.

If Install Wizard does not start automatically, go to the directory where the USB drive is located. Double click **Setup.exe**.

- 3 Complete the Install Wizard with the following default values:

- Install for anyone
- Complete installation

The maps are highly compressed and take several minutes to install.

- 4 Installation is complete when the InstallShield Wizard has finished all the necessary steps.

---

## Becoming Familiar with the MRX920

When the installation is complete, you are ready to begin using the MRX920 for meter reading. Please refer to Chapter 4 for instructions on operating the MRX920.

When turned on, the unit only beeps when receiving an MIU signal in the selected route. Other readings are silently inserted into other routes.

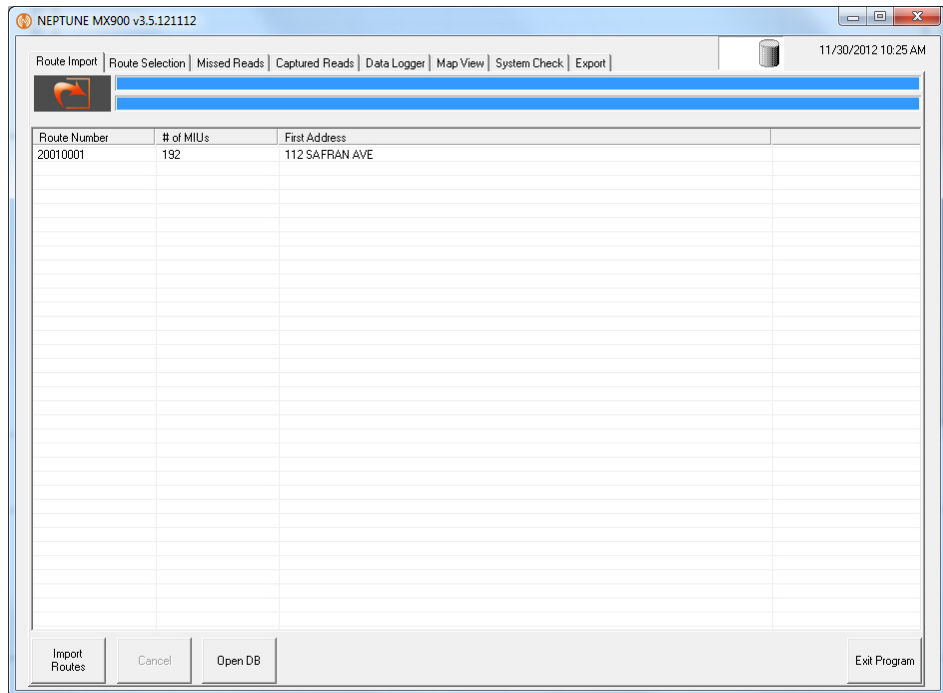

**To protect the driver's safety, use the beeper function on the MRX920 to monitor meter reading.**

The laptop computer retrieves meter readings from the receiver in realtime and stores them in nonvolatile memory. It checks meter reading completeness against route files that are downloaded from the MX900 host software. About one second after a reading is received, the message area and progress bar update the reading status of the route.

## Navigation

All MX900 functions are performed by using the cursor or using the tab

 key or the arrow     keys to move the focus to the appropriate section.

**Figure 3.27 Navigating Within the Software**

For example, Figure 3.27 shows the Route Import window with a route highlighted.

## Host Software

The MX900 host software application runs on the laptop computer that works in conjunction with the MRX920. The purpose of the software is to log meter readings from routes where R900s are installed. Messages from MIUs outside of the route are identified as such and are discarded. The MX900 host software also provides a visual interface for the operator to monitor route progress.

Although the MX900 host software can start and stop the reading of message data, it does not control the receive frequency or the decoding of message data. Instead, the MRX920 contains a receiving and processing unit that collects data only from R900s.

The file transfer between the host software and the utility company billing system is in a file format specific to Neptune's software application.

### MX900 Function Buttons

Each MX900 host software window contains different function buttons pertaining to the specific information on that window. Use the following list to identify the different buttons and their specific functions.

automatically launches the route import process

closes the software program

### Route Import Window

manually launches the import routes process

stops the import routes process

opens a dialog that allows the user to open a specific database

closes the Route Import window

### Route Selection Window

initiates the route reading process

changes the settings for the connection between the receiver and the laptop

closes the Route Selection window and moves the user to the Route Export window

### Missed Reads Window

opens a dialog that provides the user with various details for the missed read, including the selected account, the meter number, MIU, the collection method, the account name, coded notes, or skip codes

returns you to the first account in the selected route

### Captured Reads Window

opens a dialog that provides the user with various details for the captured read, including the selected account, the meter number, the type of MIU, the collection method, the account name, coded notes, or skip codes

returns you to the first account in the selected route

allows you to enter a value in Filter Text to narrow the selection of what displays on the this screen

### Data Logger Window

allows you to connect to the E-Coder®)R900i™ data logger register to extract up to 96 days of hourly consumption data

allows you to select options available while using this screen

## Export Window

launches the export of the loaded routes

closes the Route Selection window

## Reading Indicator

The Reading Indicator, located on the title bar of the software, shows the activity status of the MRX920. When the Route Selection window is first accessed, the Reading Indicator resembles the icon at the left with a red arrow, indicating that there is currently no reading activity.

When the Reading Indicator displays a pulsing green arrow, it indicates that the MRX920 is reading and storing meter reading data.

Select the  button to initiate route readings.

If for any reason the MRX920 is not receiving new data for a period longer than five seconds, the Reading arrow stops pulsing.

The **Read Route** button changes to the  button once you begin reading meters. Selecting this button temporarily stops the reading process, and the Reading Indicator no longer displays the pulsing arrow. When pressed again, the MRX920 resumes reading.

## Message Area and Progress Bar

The message area on the software window indicates the number and percentage of meters on the route that were read successfully. A progress bar also shows the percentage of the route that is complete. Before meter reading begins, no accounts are reported as read, and the progress bar is blank.

While readings are captured, the Route Total progress bar shows the percentage complete of the route selected on the Route Selection window. The Route Selection window shows both the selected Route Total as well as the readings' Grand Total.

## Information Area

The information area of an MX900 window displays the route or addresses to be read. These following views are available:

- The route view includes the route number, number of MIUs to be read, first address on the route, and percentage of the route that was read.
- The account view provides a listing of the addresses and MIU IDs to be read for a specific route. If you select account detail, the information area displays details for the selected account.
- A meter reading and loading indicator area with a graphic progress bar and pulsing Reading Indicator.
- A message and information display area.
- An active function icon or Reading Indicator.

## Route Selection Window

The Route Selection display window illustrated in Figure 3.28 shows loaded routes and the percentage of each route that has been read. The window includes the Reading Indicator, an information area with a list of routes, and a selection box that allows you to enable the audible tone.

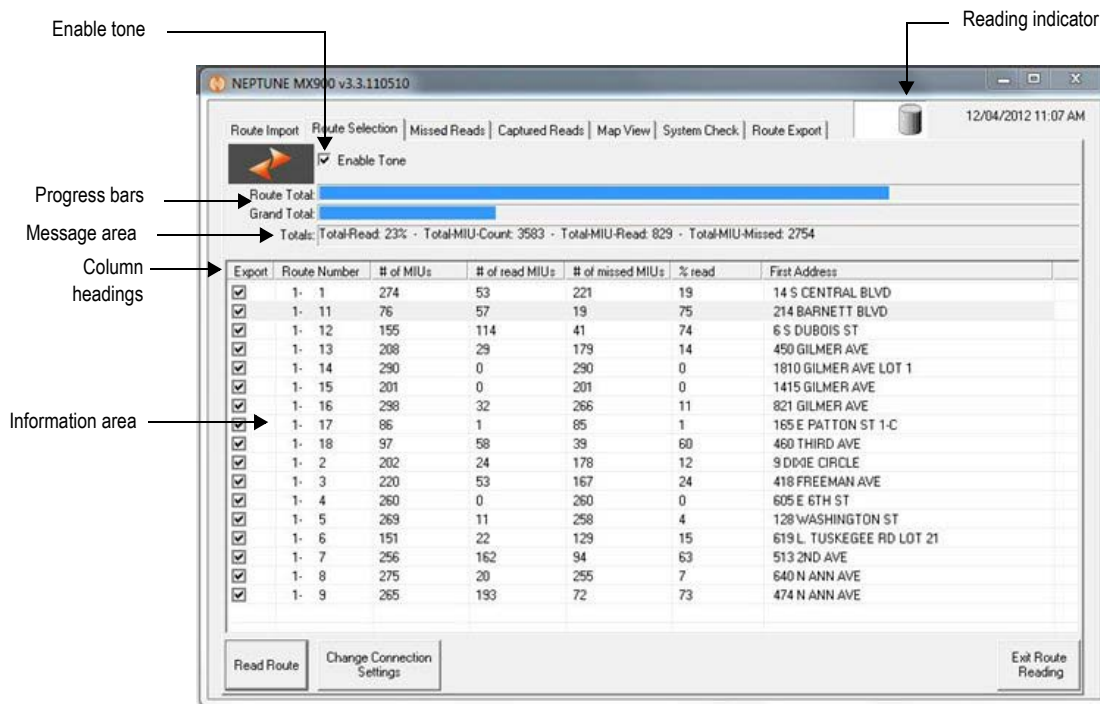

Figure 3.28 Route Selection Window

You can sort your information by clicking one of the column headings. All the information then displays in the order of the selected column.

### Route Display Windows

There are two windows, the Missed Reads window and the Captured Reads window (Figure 3.29), that provide information for a selected route. Both of these windows have a message area for the selected route with the total number of meters on the route, the number that was read successfully, and the number that was missed. The Missed Reads window also has a progress bar that shows the percentage of the route that has been successfully read.

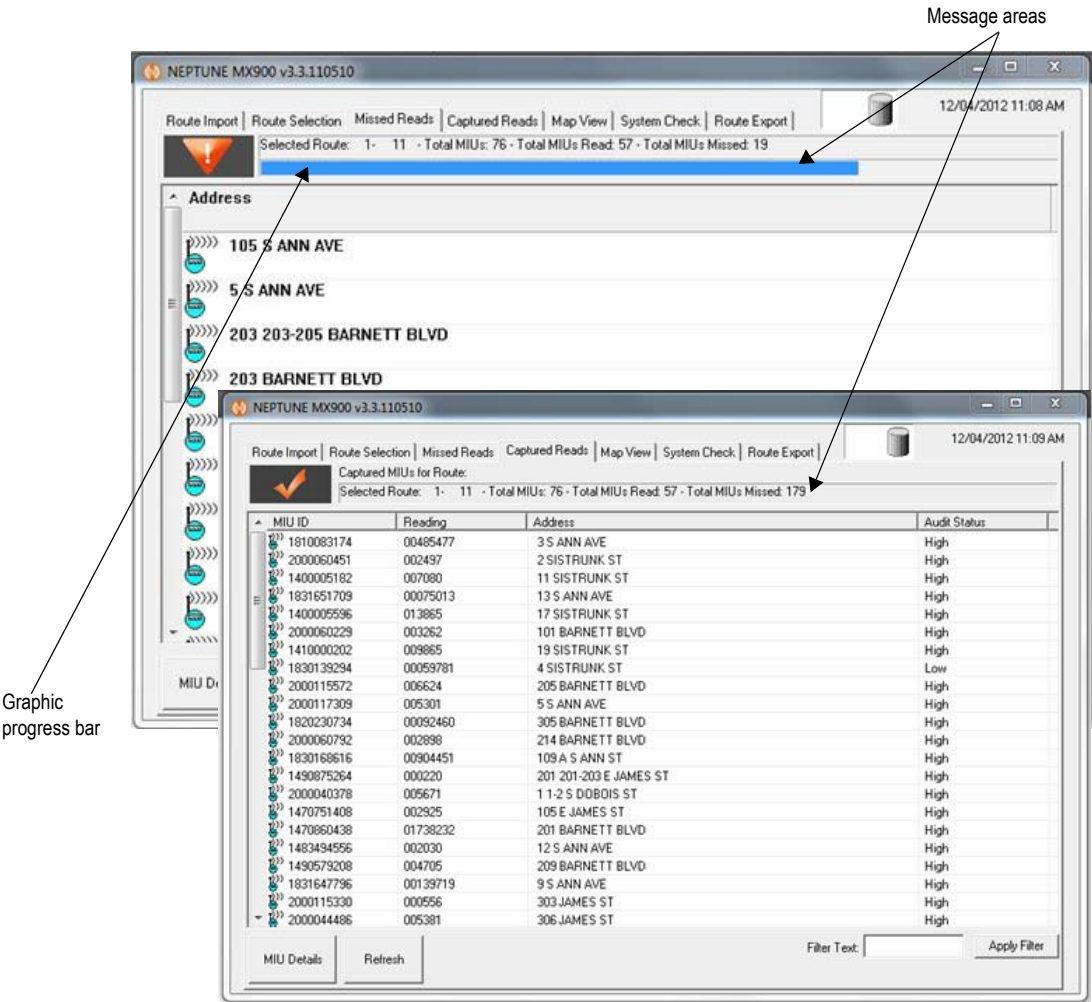

Figure 3.29 Missed Reads and Captured Reads Windows

## Viewing MIU Details

It is possible to view the details of a specific MIU from either the Missed Reads or Captured Reads window. The software allows you to immediately identify the type of MIU by looking at the icons to the left of each MIU in the information field.

- The blue MIU icon represents an R900 RF transmitter.
- If **Hide inactive meters** is selected on the host software, inactive meters are listed as unread meters on the Missed Reads window, represented by this icon. Once the inactive meters are read, they move to the Captured Reads window.

Use the following procedure to access more detailed information on a specific MIU.

- 1 Select the specific MIU by touching the window with the stylus or by using the  or the  keys.
- 2 Press the **MIU Details**  button.

The MIU Details dialog (Figure 3.30) appears.

The MIU Details dialog box contains the following fields and controls:

- Parent Route:** 1- 11
- Account Number:** 110340000
- Meter Number:** 92699
- Account Address:** 11 SISTRUNK ST
- Account Name:** MCKEE & ASSOCIATES.
- Collection Method:** R900
- MIU-ID:** 1400005182
- MIU Type:** R9
- Channel:** 0
- Wakeup Tone:** 0
- Account Status:** A
- Tamper Code:** 0
- Device Type:** 161
- H\_Audit:** 699
- L\_Audit:** 670
- Prev\_Read:** 669
- Read Instr1:**
- Read Instr2:**
- Location 1:**
- Location 2:**
- Hazard:**
- FreeNotes:** (Large text area)
- Coded Notes:**
- TroubleCode Description:** (Dropdown menu)
- SkipCode:**
- SkipCode Description:** (Dropdown menu)
- Reading:** 007080
- Geo\_Location:**
  - Longitude:** -85.89219
  - Latitude:** 32.53550
- Old\_Tamper:**
- Buttons:** EXIT, SAVE

Figure 3.30 MIU Details Dialog

## Upgrading MX900

Complete the following steps to upgrade the MX900 host software:

- 1 Verify that all route processing has been completed and that data has been exported to the host system.
- 2 Verify that all data has been accepted by the host system and can be processed by your billing system.
- 3 Using the Windows **Add/Remove Programs** in **Control Panel**, remove the existing application software.

Depending on the model, the application program may be either EZDrivePLUS or MX900.

4 Using **Windows Explorer**, remove the following folder:

- **C:\Program Files\Neptune\EZDrivePLUS**

or

- **C:\Program Files\Neptune\MX900**

5 Insert the upgrade CD.

The Install Wizard starts automatically.

If the Install Wizard does not start automatically, use Windows Explorer to select and double click Setup.exe on the CD.

6 Follow the Install Wizard instructions to complete the setup.

*Notes:*

## Chapter 4      Using the MRX920

---

Using the MRX920 to collect readings begins with the host software building a route file that is transferred to the MRX920. There are a number of defined ways to load an import file. You can use a wired network, WiFi network, local file system, storage device (SD) card, USB flash drive, and the like.

### Removable Storage

This section discusses the use of a removable storage for the MRX920, which can be a thumb drive, compact flash (CF) card, SD card, or similar storage. If you use a removable source, the storage should be left in the PC until the route is exported, because the export information goes back onto the card from which the import file came.

#### USB Flash Drive

If you are using USB flash drive for removable storage, you must export the route after collecting the readings and before removing the USB drive.

When using a USB flash drive, the meter reader inserts the USB flash drive into the laptop and begins automatic meter reading by driving the vehicle through the route and collecting readings. After the readings are complete, the meter reader exports the route. He then returns to the utility, shuts down the MRX920, and removes the USB flash drive to give to the host computer operator. The host computer operator transfers the data from the USB flash drive to the host computer software and transfers the data to the utility billing system computer.

## Import File

If the import file is located on a network source and you do not plan to copy the import file locally, then you must import it while still connected to the network. Once you finish collecting reads you will need to reconnect to the network source before you export the readings. The source location of the import file must exist on the PC before you attempt to export the route.

## Using Wireless Communications

Using a wireless connection, the meter reader downloads the route information onto the laptop and begins automatic meter reading by driving the vehicle through the route and collecting readings. After the readings are complete, the meter reader then transfers the data to the host computer using the wireless connection.

## Audible Tone Settings

An audible tone or beeper is available in the MRX920 to emit a beep tone for every account that is read and stored in the MX900 host software. This allows the driver to safely monitor the reading progress without having to look at the laptop screen.

The audible tone only sounds while the MRX920 is performing readings and stops when all readings are complete. You can turn the tone function on or off while the unit is performing readings. The default setting in the MRX920 is for the beep tone to be off.

### Enabling the Audible Tone

Complete the following steps to enable the audible tone or beeper on the MRX920.

- 1 Access the Route Selection window.

At the top of the window, there is a check box for **Enable Tone**, as shown in Figure 4.1 on page 4-3.

Tones are only heard when readings are posted for MIUs in the selected route. Meters in other routes can be read without sounding a beep.

Enable tone  
check box

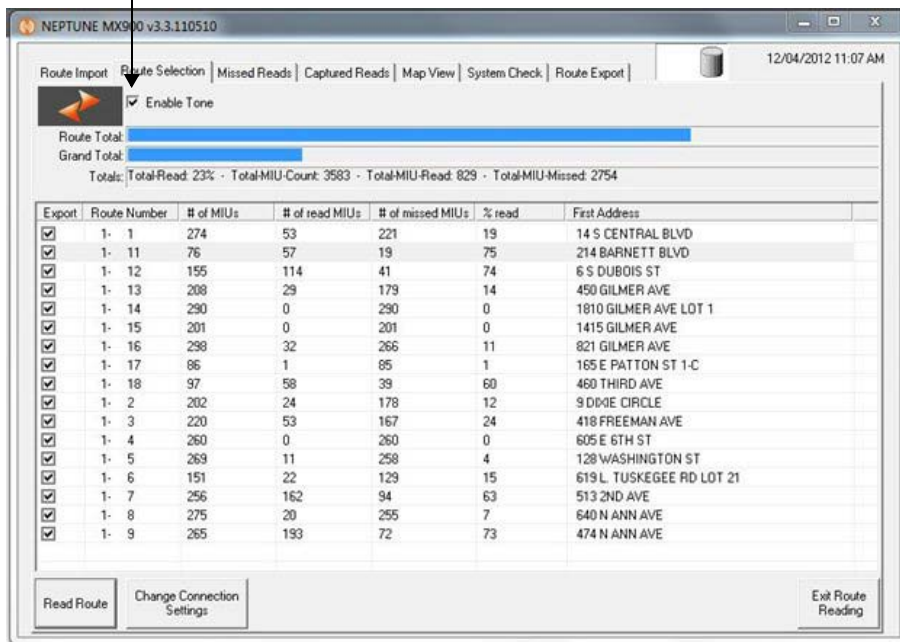

Figure 4.1 Enable Tone Check Box Field

- Click the **Enable Tone** check box to select it.

A check in the box indicates the audio tone is enabled and on. An empty box indicates the audio tone is off.

## Setting Up the Connection

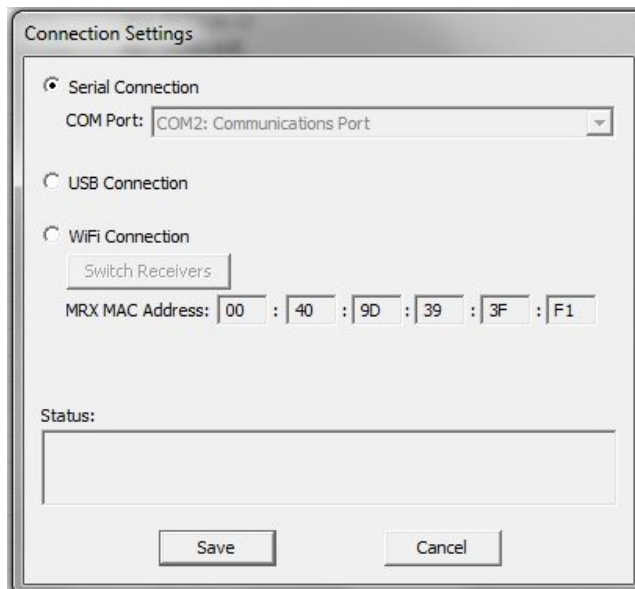

To set up the type of connection you will use, complete the following steps.

- Access the Route Selection window.

- Click

The Connection Settings Dialog appears as illustrated in Figure 4.2.

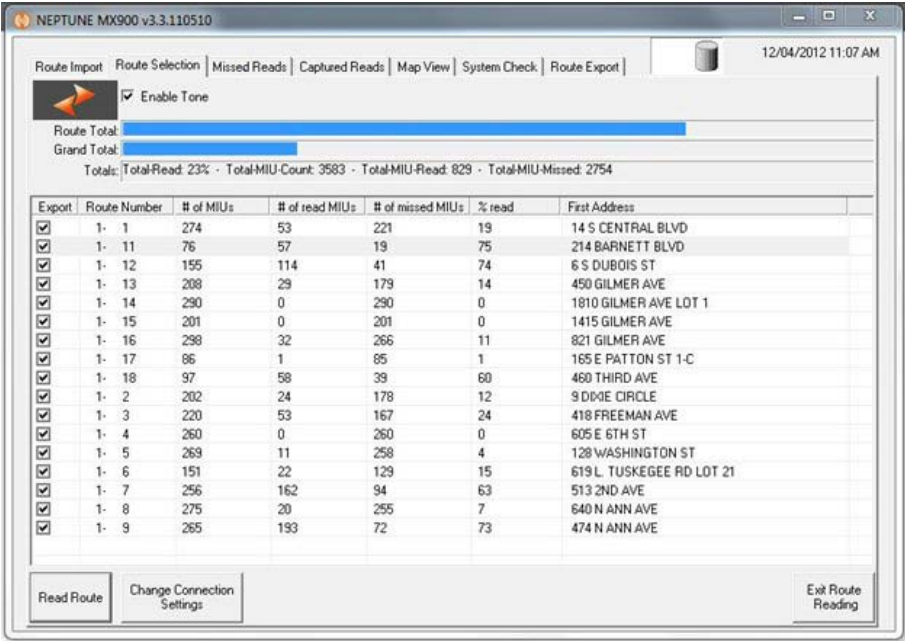

**Figure 4.2 Connection Settings Dialog**

- 3 Select one of the three following methods to import and export routes, and complete the applicable information.
  - Serial Connection, see “Setting Up the Connection” on page 3-15.
  - USB, see “Initial USB Connection” on page 3-19.
  - WiFi, see “Initial WiFi Connection” on page 3-17.

## Selecting Routes

This is an optional step if you want to review selected routes to determine a good starting point for reading.

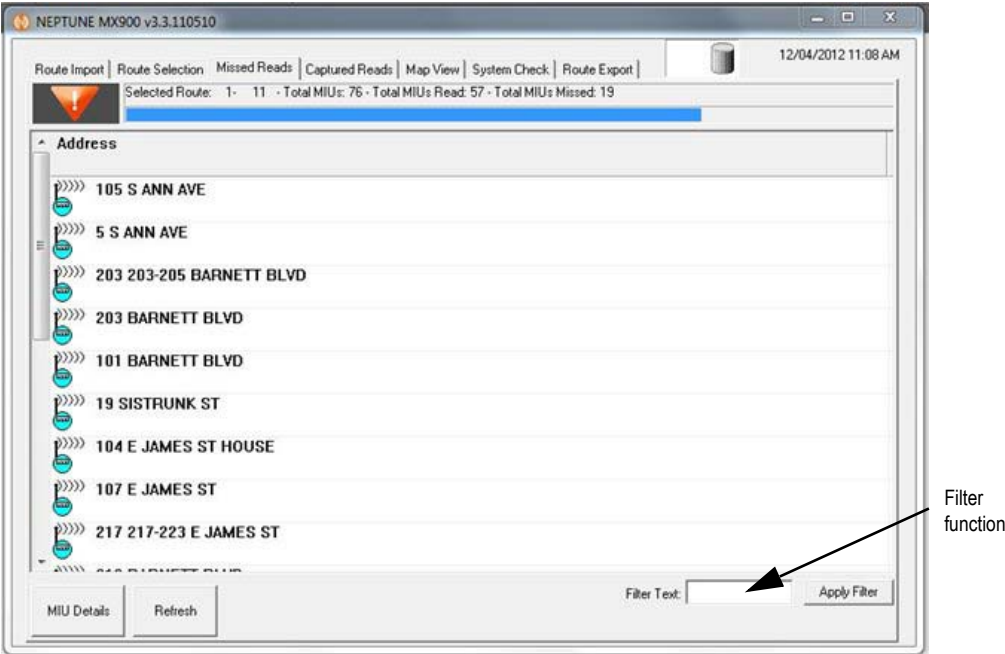

- 1 Access the Route Selection window, shown in Figure 4.3 on page 4-5, by clicking the **Route Selection** tab.

### Figure 4.3 Route Selection Window

- 2 Highlight the route to be viewed.
- 3 Select the **Missed Reads** tab to display the Missed Reads window.

Only accounts in the selected route that are unread or missed during the reading process are displayed on the Missed Reads window as shown in Figure 4.4.

**Figure 4.4 Missed Reads Window**

The Missed Reads window appears showing the accounts in the route, with the first address in the route on the first line.

You can narrow the list of missed reads or captured reads by using a filter which is applied as a substring on all fields on the MIU Details screen. Any substring match on any field results in the MIU being counted as part of the filter. To use a filter:

- On either the Missed Reads or Captured Reads window, type the text to use to filter your search in the Filter Text field.
- Click . The list of missed reads or captured reads appears narrowed down to reflect your filter test.

4 If necessary, select another address for your starting point.

## Detail Settings

When viewing route information in the software, you can view the details of a specific account. Account details consist of the following:

- Parent Route
- Meter Number
- Account Name
- MIU-ID
- Channel
- Account Status
- Old\_Tamper
- Account Number
- Account Address
- Collection Method
- MIU Type
- Wakeup Tone
- Tamper Code
- Device Type

### Viewing Account Detail

Complete the following steps to view account details for selected accounts.

- 1 From the Route Selection window, highlight the route containing the account you want to view, as shown in Figure 4.6 on page 4-9.

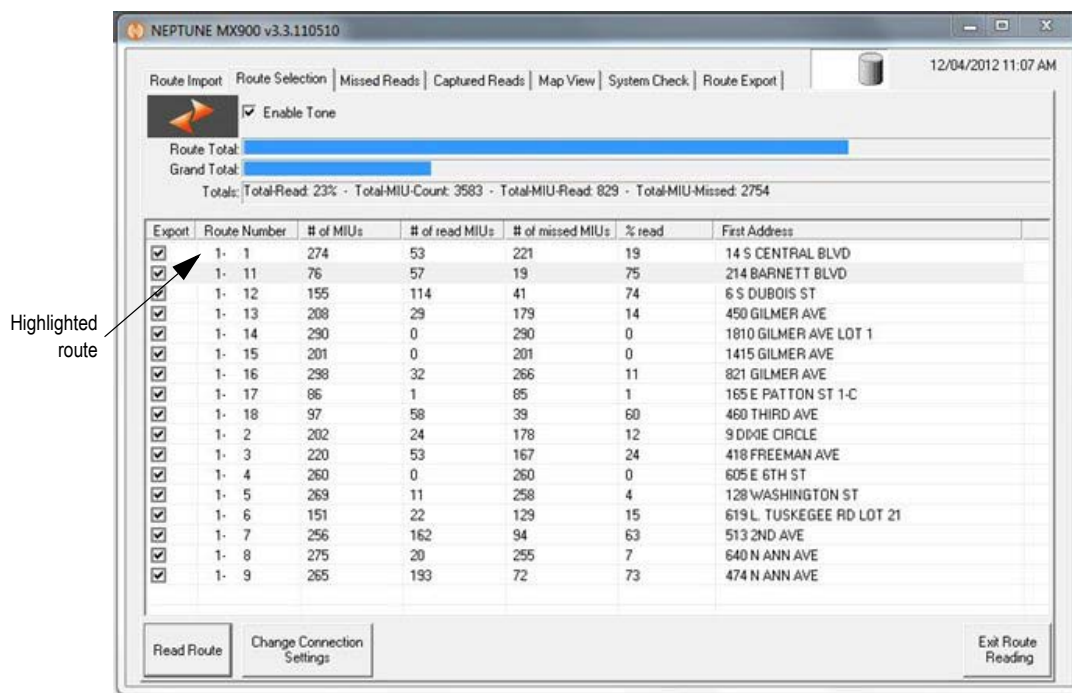

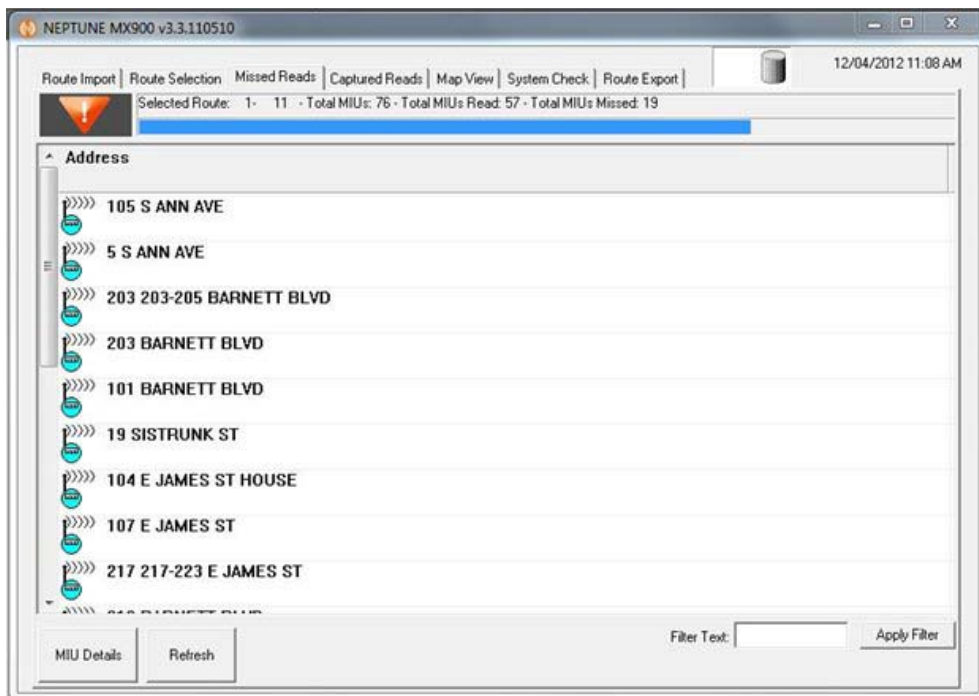

Figure 4.6 Route Selection Window with Route Highlighted

- 2 Go to either the **Missed Reads** or **Captured Reads** window, depending on whether or not the account has already been read. See Figure 4.7.

**Figure 4.7 Captured Read Window with Account Highlighted**

- 3 Highlight the specific account as illustrated in Figure 4.6 on page 4-9.

- 4 Press the **MIU Details**  button.

The MIU Details dialog appears with the details of the selected account. See Figure 4.5 on page 4-7.

- 5 To close the MIU Details dialog, select **OK**.

## Reading Meters

Because the MRX920 automatically reads meters, efficient use of the system depends on two factors:

- Distance of the MRX920 from the MIU being read.
- Vehicle's driving speed.

In a typical meter reading scenario, you drive your vehicle through the routes listed on the Route Selection window in any order. You can position your vehicle at any route or starting address as required by driving conditions and route distribution for the most efficient data collection. The MRX920 reads and stores readings regardless of the order of the routes displayed.

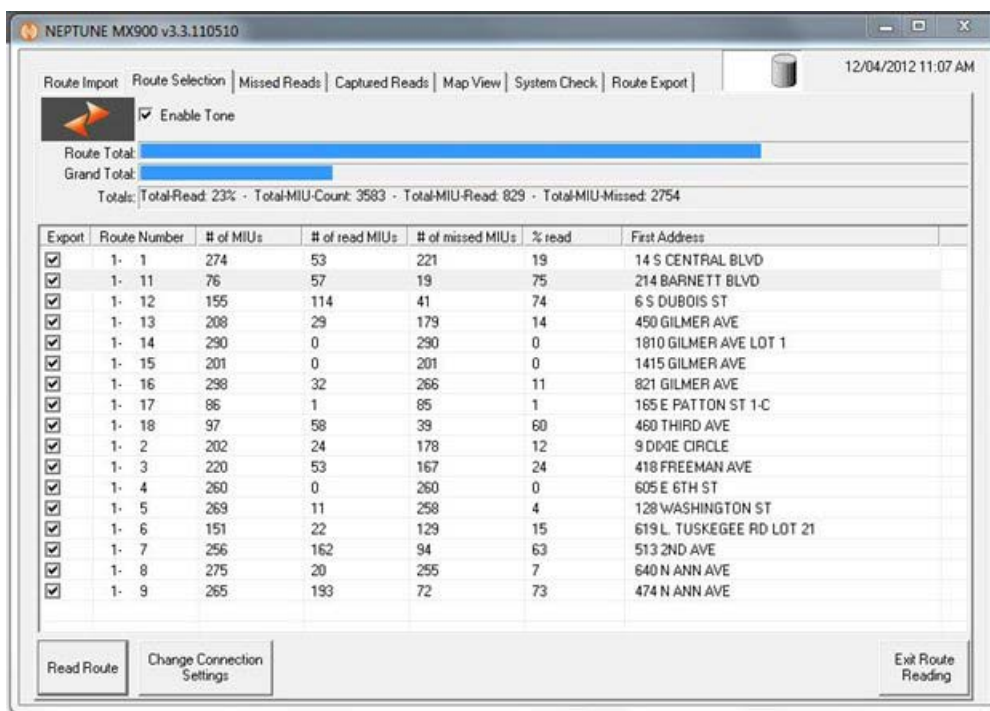

Figure 4.8 Route Selection Window

When the MRX920 starts collecting data, the Reading Indicator changes to display a pulsing green arrow. This icon continues to pulse as long as read data is received within a period of five seconds.

In normal use, you focus on driving and listening for beeps on the selected route. You **DO NOT** need to look at the screen on the laptop while you are driving. The MRX920 automatically receives and stores any readings within range for any MIU IDs that are loaded on the laptop.

## Collecting Readings

For the meter reader's safety, the MRX920 is designed so that there is no requirement to use the laptop display and keyboard while driving. To verify that the unit is reading properly, use the beeper option to monitor readings.

On occasion, it could be necessary for the driver to stop and view routes and display account detail. A meter reader can easily suspend meter reading and restart it before continuing on a route. See “Pausing and Restarting Meter Reading” on page 4-22.

### Starting the Meter Reading Process

Complete the following steps to begin collecting meter readings after you have positioned your vehicle at the starting address and started up the MRX920 and laptop computer.

To read meters, the plug-in power cord on the MRX920 must be connected to the vehicle power supply receptacle. Make sure the red LED is lit on the power cable.

- 1 From the welcome window, press the **Start**  button, and the routes on the USB flash drive automatically load into the software.
- 2 Highlight the route where you begin reading.

The Route Selection window automatically appears.

- 3 Click the route you want to see on the Missed Reads and Captured Reads windows.

- 4 Press the **Read Route** button.

Read Route

Figure 4.9 Reading a Route

The Reading Indicator turns on and pulses to indicate that reading is in progress. Addresses and routes that are successfully read are listed on the Captured Reads window; any remaining unread or missed routes are listed on the Missed Reads window. The Reading icon continues to pulse as long as read data is received within a period of five seconds.

The icon  represents inactive meters that are listed as unread meters on the Missed Read window, if **Hide inactive meters** is selected on the host software. Once the inactive meters are read, they move to the Captured Reads window. Refer to "Viewing MIU Details" on page 3-35.

- 5 Start driving your vehicle by each address along the route at the posted speed limits.

While the antenna is designed to stay in place at speeds of up to 70 mph, Neptune recommends operating the MRX920 at speeds not to exceed the legal limits. For optimal performance, the MRX920 should not be operated at speeds greater than 30 mph.

Use the Audible Tone function on the MRX920 to monitor meter reading while driving. Use of the laptop display or keyboard can compromise driver safety. See “Enabling the Audible Tone” on page 4-2.

- 6 If the message area at the top of the Captured Reads window indicates that all accounts on the route have been read (as shown in Figure 4.10), select the next route to be read.

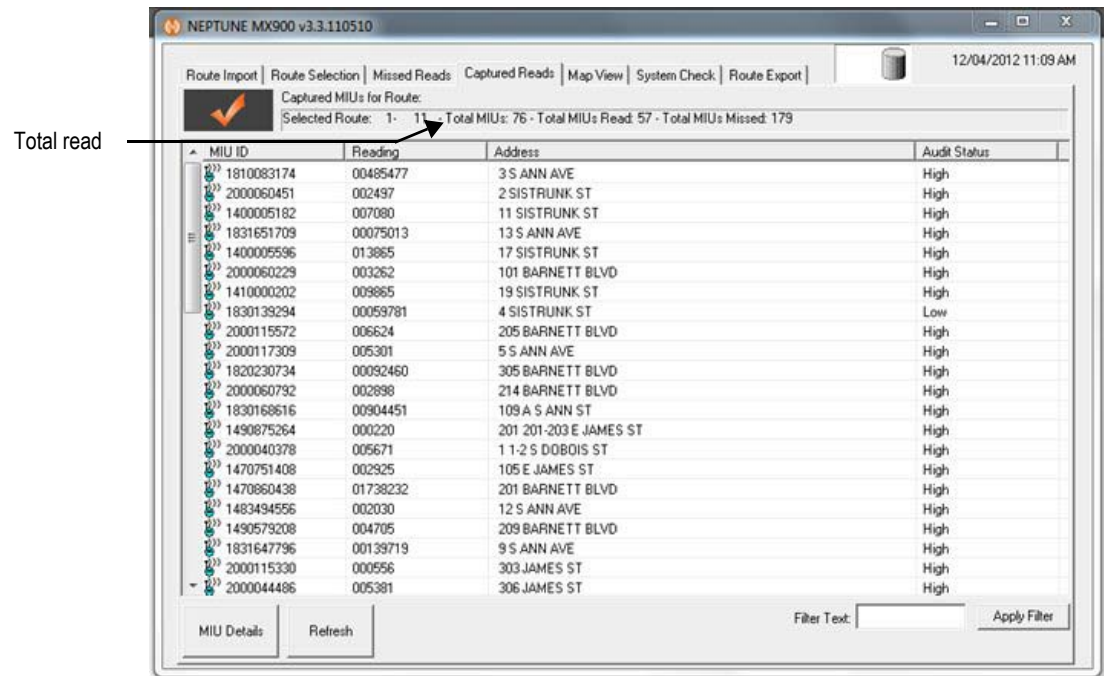

Figure 4.10 Route With All Reads Completed

The Reading Indicator on the software window pulses as you continue driving each route until all of the routes have been read. When reading is completed, check the Missed Reads window to see if there are any missed accounts.

7 Choose from the following:

- To pause the meter reading before all routes have been read, see “Pausing and Restarting Meter Reading” on page 4-22.
- To reread missed meters, see “Using Coded Notes or Skip Codes” on page 4-18.
- To end meter reading and upload the read data to the host software, see “Exiting the Software” on page 4-43.

## Navigation on the Route Display Window

Before you complete readings with the MRX920, you can move between routes displayed on the window to select the information you want to view. This also gives you access to route details and individual account information.

You can move between the routes whether or not the MRX920 is actively reading meters.

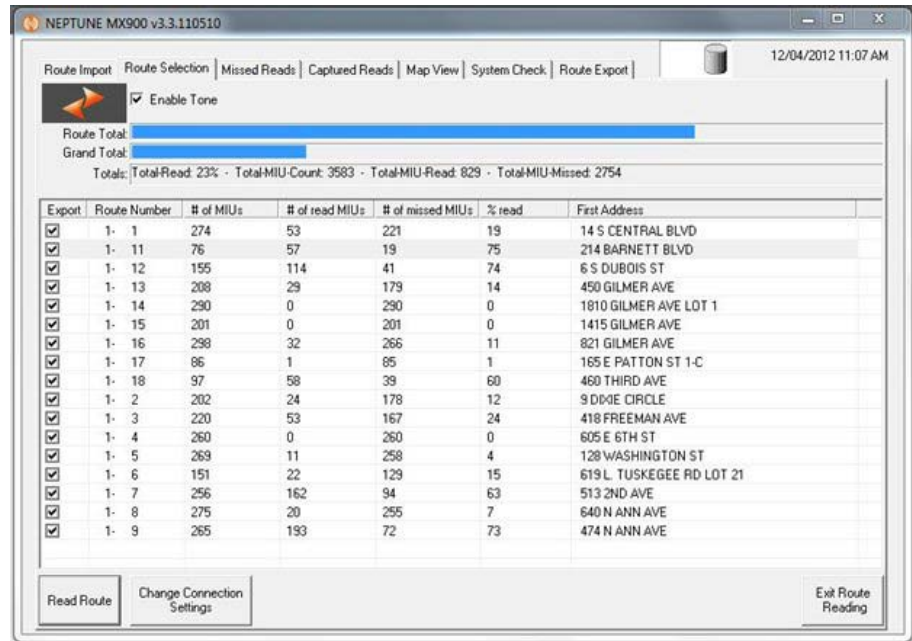

1 Select the desired route.

- 2 Press  to move backward through the route or  to move forward through the route.

## Viewing Routes

Complete the following steps to select routes to display route reading progress and route detail. You can perform this procedure whether or not routes are actively being read.

- 1 Press the **Route Selection** tab to access the Route Selection window, shown in Figure 4.11 on page 4-16.

**Figure 4.11 Route Selection Window**

- 2 Highlight the specific route you want to view.

The top graphical progress bar displays the percentage of the route that is complete.

- 3 Select the Missed Reads or Captured Reads window. See Figure 4.12 on page 4-17.

Both windows display the individual accounts within the selected route. The message area at the top of the window displays the route number, total MIUs, total MIUs read, and total MIUs missed.

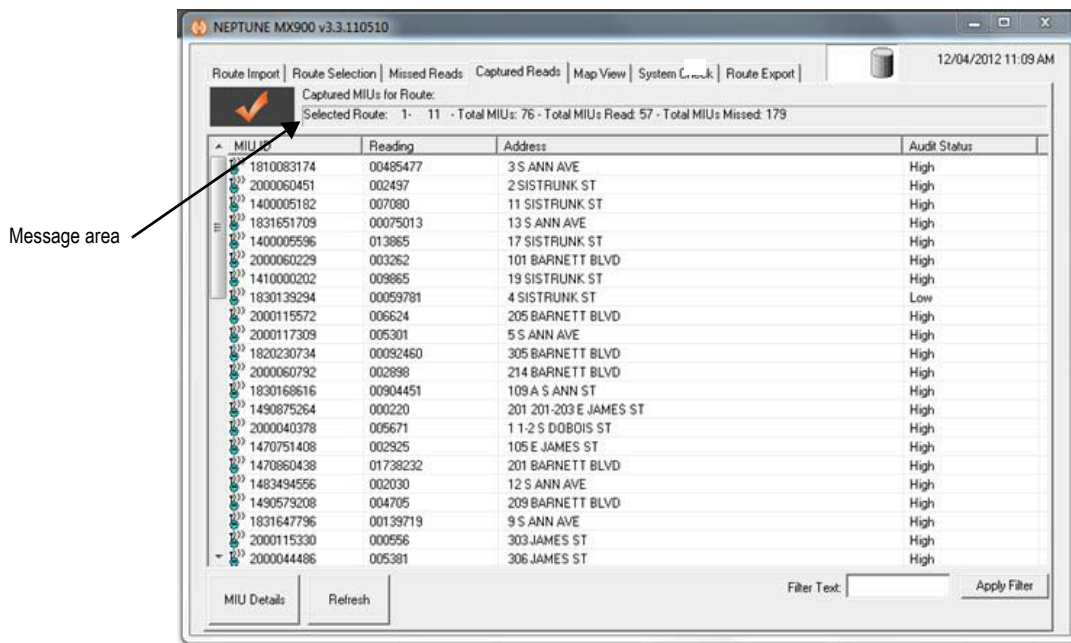

Figure 4.12 Captured Reads Window Message Area

You can narrow the list of missed reads or captured reads by using a filter.

- On either the Missed Reads or Captured Reads window, type the text to use to filter your search in the Filter Text field.
- Click . The list of missed reads or captured reads appears narrowed down to reflect your filter test.

---

## Identifying Missed Accounts

Occasionally, because of driving speed, RF interference, or problems with the MIUs, it is possible to miss a meter reading.

Usually, you can tell if meters are missed because the route does not progress to a read status of 100%. To view the missed accounts:

- 1 From the Route Selection window, highlight the route containing the missed reads.
- 2 Press the **Missed Reads** tab to display the Missed Reads window.

All missed accounts are listed in the information area on the window.

Refer to the following section, “Viewing Account Details” on page 4-18 for specific details of a missed account.

## Viewing Account Details

Before reading begins, the Route Selection window displays zeros for all routes in the **# of read MIUs** field. Once reading is initiated, the captured reads for each route are recorded in this field.

After meter reading is complete, only the missed or unread accounts remain on the Missed Reads window. The meter reader then knows which addresses to reread.

If for any reason the MRX920 is not able to read missed MIUs on the second attempt, the meter reader can select specific accounts by using the MIU Details dialog to display more information for the account.

## Using Coded Notes or Skip Codes

You can use the MIU Details window to record trouble that you are having with the reading. Or if you choose to skip the reading, you can record the reason. However, you cannot have an automatic reading with a skip code. The skip codes mean that you are skipping the reading.

When viewing details for an account, only two of the three notes fields can display. There is always the reading code and either a trouble code or a skip code.

### Entering a Trouble Code

To enter a trouble code, complete the following steps.

- 1 On the **MIU Details** window, tab to the **Coded Notes** field.
- 2 Choose one of the following options:
  - If you already know the trouble code, type it in the **Coded Notes** field.
  - If you do not know the code, tab to the **TroubleCode Description** field and select the reason code from the drop-down selection list.
- 3 Press **Save** to record the reason for the trouble.

### Entering a Skip Code

To enter a code for why you skipped a reading, complete the following steps.

EZRouteMAPS customers should NOT use skip codes.

- 1 On the **MIU Details** window, tab to the **SkipNotes** field.
- 2 Choose one of the following options:
  - If you already know the skip code, type it in the **SkipNotes** field.
  - If you do not know the skip code, tab to the **SkipCode Description** field and select the reason code from the drop-down selection list.
- 3 Press **Save** to record the reason for skipping the reading.

## Moving From One Account to the Next

Before completing readings for the addresses in a route, you can move between accounts to select the account to display.

- 1 Select the desired account.
- 2 Press  to move backward through the route or  to move forward through the route.

## Displaying Account Detail

Complete the following steps to view route detail for selected routes.

- 1 From the Route Selection window, highlight the appropriate account.
- 2 Select either the **Missed Reads** window or the **Captured Reads** window depending on whether or not the account has been read.
- 3 Highlight a specific account.
- 4 Press the **MIU Details**  button.

The MIU Details dialog (Figure 4.13) appears.

The MIU Details dialog box contains the following fields and controls:

- Parent Route:** 1- 11
- Account Number:** 110340000
- Meter Number:** 92699
- Account Address:** 11 SISTRUNK ST
- Account Name:** MCKEE & ASSOCIATES.
- Collection Method:** R900
- MIU-ID:** 1400005182
- MIU Type:** R9
- Channel:** 0
- Wakeup Tone:** 0
- Account Status:** A
- Tamper Code:** 0
- Old\_Tamper:** (empty field)
- Device Type:** 161
- H\_Audit:** 699
- L\_Audit:** 670
- Prev\_Read:** 669
- Read Instr1:** (empty field)
- Read Instr2:** (empty field)
- Location 1:** (empty field)
- Location 2:** (empty field)
- Hazard:** (empty field)
- FreeNotes:** (large text area)
- Coded Notes:** (empty field)
- TroubleCode Description:** (dropdown menu)
- SkipCode:** (empty field)
- SkipCode Description:** (dropdown menu)
- Reading:** 007080
- Geo\_Location:**
  - Longitude:** -85.89219
  - Latitude:** 32.53550
- EXIT** button
- SAVE** button

**Figure 4.13 MIU Details Window**

The collection method on the Account Detail window is unlicensed radio frequency (R900 MIUs). Usually route numbers are derived from the route numbers assigned at the time of previous meter reading routes, such as handheld meter reader routes.

In addition, the fields for **Coded Notes** or **Skip Codes** allow you to record information about this account. See “Using Coded Notes or Skip Codes” on page 4-18.

## Reading Missed Accounts

The procedure for reading missed accounts is similar to the procedure used on the initial reading. To assist in reading missed accounts, you need to view route and account details to locate the exact starting point for reading. It is also helpful to drive slower and get as close as possible to the missed meters to improve chances of receiving read data.

To identify a missed meter, select a route from the Route Selection window that shows a read status of less than 100% in the progress bar at the top of the window. Once selected, missed accounts from that route are shown on the Missed Reads window.

If necessary, use the **MIU Detail** button for the missed account and determine if there are any problems with the account that prevent a successful reading. Note the address of any accounts for subsequent reading and reporting.

To read a missed meter, drive to the first unread account address on the route. Read the remaining accounts on the route.

If you do not succeed in reading an account after a second attempt, the account remains with a status of “unread.” The utility can initiate follow-up action to investigate the source of the reading problem.

---

## Pausing and Restarting Meter Reading

Complete the following steps to stop and then restart data collection using the MRX920. This is useful if you want to review the route reading status of a route or individual account or if you need to look up the starting address for a route to be read.

- 1 While the Reading Indicator is pulsing, press the **Pause Route**

button.

The Reading Indicator stops displaying the pulsing green arrow. When you press the Pause Route button, the red arrow displays.

- 2 To review account information before restarting, select either the Missed Reads or Captured Reads window depending on whether or not the account has already been read.

- 3 Select an account and press the **MIU Details**  button.

- 4 To resume automatic reading, press the **Read Route**  button.

Reading continues and the Reading Indicator switches back to a status of “Reading”.

## Using the Data Logger

The Data Logger feature provides the ability to extract up to 96 days of hourly consumption data within the R900® System environment. The data logging enhancements makes configuring, generating, and analyzing consumption information easier and more intuitive. Hourly and daily graphs can be generated to show leak and reverse flow events. The ultimate goal is to provide solutions that meet your needs and make the day-to-day tasks a little easier.

Please contact your Neptune sales representative to confirm that your endpoint is compatible with data logging functionality.

The data logger graph and report display the information captured from an E-Coder)R900i data logger register. The data logger is a feature that is configured and installed at the factory. You do not need to do anything to configure or begin logging data. Once the data is captured by the MRX920, it is then unloaded into the MX900 host software so graphs and reports can be run to analyze the data. The data logger graph is a visual representation of water usage over a defined period of time. Data logger information is useful for indicating leaks, reverse flow, and usage that have occurred over the past few months. The data logger report displays captured information in an alternative view, displaying actual interval captured readings and consumption values over a defined period of time. The data logger report also indicates any leaks and reverse flow that have taken place during the time frame.

## Special Considerations for the Data Logger

Please consider the following when using the data logger.

- Data logging is only available with MRX920 firmware version 7.04 or later.

You can contact Customer Support to obtain an RMA to send your unit to be upgraded to this firmware version. See “Contacting Customer Support,” on page 1-5.

- Data logger information is only exported if a version 5.0 route import file is received from the host or if no route import file is used.
- Data log sessions are only kept in the MX900 host software for 30 days regardless of whether or not they are exported.
- Data log sessions are only exported one time even if they still appear on the data log tab.

## Using the Data Logger

To use the Data Logger, complete the following steps.

- 1 Click the **Data Logger** tab.

**Figure 4.14 Data Logger Tab**

The following message appears if the you have not previously connected to the receiver for route reading or data logging.

If you haven't used the receiver prior to this time, click

Connect To Receiver

- 2 Click

- 3 Using the light sensor, activate LCD on the data logging device. See “Activating the Data Logger,” on page 4-25.

## Activating the Data Logger

The light sensor is recessed under the small round hole near the center of the dial face on the data logging device. The hole is marked with a flashlight graphic. See Figure 4.15.

**Figure 4.15** Light Sensor for Data Logging Device

The light sensor activates the LCD display for several minutes when the unit is exposed to a light source. For example, a unit mounted in an inside location would turn on the LCD for several minutes after the room light is turned on.

A unit mounted in an outside pit would turn on the LCD for several minutes after the pit lid is opened exposing the unit to daylight. If the LCD is currently off, the LCD may be reactivated by covering the dial plate with your hand for about two seconds. In bright sunlight, it may be necessary to close the cover or the pit lid momentarily. If the LCD does not reactivate as expected, try shining a flashlight on the light sensor.

**Figure 4.16** Activating with a Flashlight

A message appears at the bottom of the Data Logger screen informing you of the progress of the data logging.

**Figure 4.17 Data Logger Progress Bar**

If the data logging fails, the following message appears.

**Figure 4.18 MIU Header Not Heard Message**

When the data logging is complete, the Data Logger screen displays the number of packets received.

While activating the data logging device, the route reading is suspended. Once the data logger has completed, the route reading is resumed. If you cancel the data logging, no data is saved, and the route reading is resumed.

## Selecting Meter Combinations

During the data logging process, you are asked to select a meter combination. See Figure 4.19.

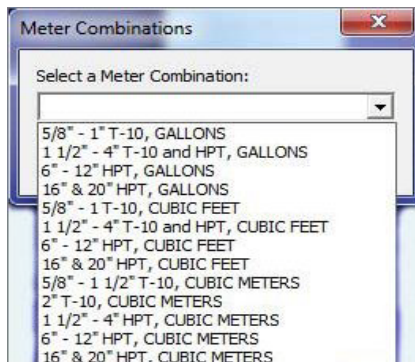

Figure 4.19 Select Meter Combinations Dialog

- 1 On this screen, do one of the following:
  - From the drop-down selection list, click the meter combination you want.
  - Press **Ctrl + M** to display the Meter Combinations, as illustrated in Figure 4.20.

Figure 4.20 Meter Combination Defaults

## Viewing the Data Logger Information

The Data Logger Graph and Report display the information captured from an E-Coder)R900i data logger register. Once the data is captured by the data logging device, it is then unloaded into the MX900 host software so graphs and reports can be run to analyze the data.

### Data Logger Graph

The Data Logger Graph is a visual representation of water usage over a defined period of time. Data logger information is useful for indicating leaks, reverse flow, and usage that have occurred over the past few months. You can generate hourly and daily graphs to show leak and reverse flow events. The ultimate goal is to provide solutions that meet your needs and make the day-to-day tasks a little easier.

The following graphs are available for data logging.

**Bar graph**

Displays the bars in different colors to represent the following:

<i>Blue</i>	No flags, actual consumption.
<i>Yellow</i>	No flags, incomplete daily consumption calculation. Only the first or last bar can be yellow.
<i>Red</i>	Leak
<i>Gray</i>	Reverse flow

These colors are in priority from lowest to highest. The bar is colored with the highest priority. *Example:* If a bar has a leak and a reverse flow, then the bar is painted gray.

**Line graph**

Displays in blue only; it is drawn as a line from point to point instead of single bars for each point.

## Daily Graphs

The following is a sample of the daily data logger information in graph format.

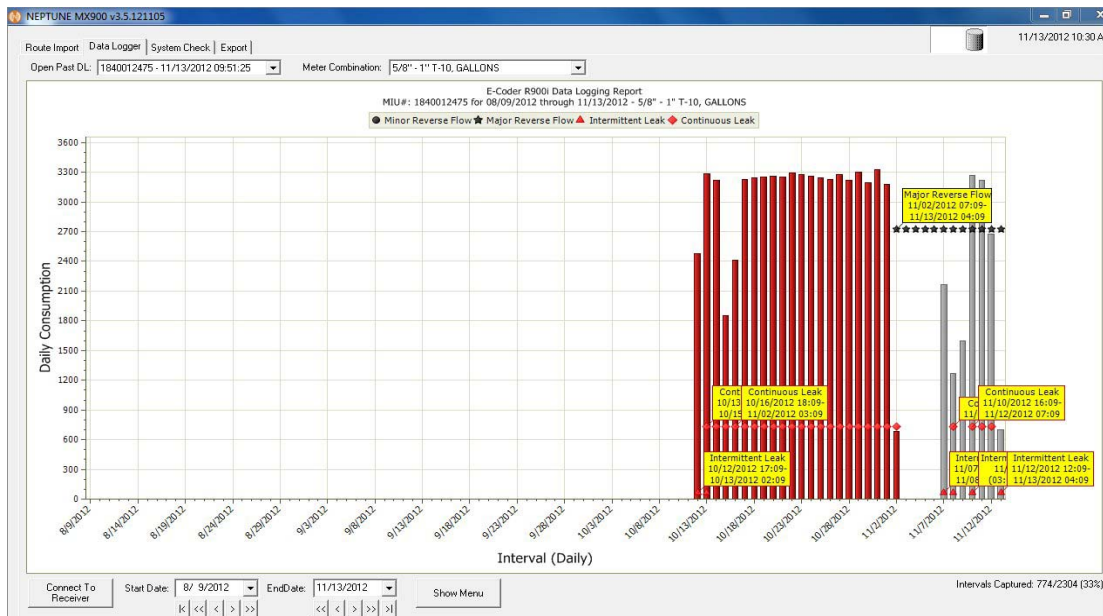

Figure 4.21 Sample Daily Data Logger Graph

## Displaying Different Graph Information

Complete the following steps to show different graph information.

- 1 Do one of the following:
  - Right-click on the graph to display the menu of available options.
  - Select  to display the menu of available options.

See Figure 4.22 on page 4-30.

Figure 4.22 Show Menu Graph Options

2 Select whatever available options you want to use.

Table 4.1 Data Logging Menu Options

Option	Description
Reset	Refreshes the screen with the original data logging values
Show report/graph	Displays the data logging information in report or graph format, as applicable
Hide reverse flow	Hides the data logging reverse flow icons
Print	Sends the data logging information that appears to a printer
Save as PDF	Saves the information that appears in a PDF file
Bar	Displays the data logging information in a bar graph format
	<ul style="list-style-type: none"><li>• Selecting <b>Hourly</b> plus <b>Bar</b> can only display three days of data</li><li>• Selecting <b>Back</b>, which appears if you double-click a daily value, shows hourly data for the day. The Back button returns you from the hourly view to the daily view</li></ul>

**Table 4.1 Data Logging Menu Options**

Option	Description
Line	Displays the data logging information in a line graph format
Daily	Displays only daily data logging information in the graph or report format you select
Hourly	Displays only hourly data logging information in the graph or report format you select
	Selecting <b>Hourly</b> plus <b>Bar</b> can only display three days of data
Show all labels	Displays all the data logging labels for the graph you select
Remove all labels	Hides all the data logging labels for the graph you select

- 3 Use the available buttons at the bottom of the screen. See Figure 4.23.

**Figure 4.23 Graph Buttons**

- 4 In **Start Date**, select the starting date for the information you want to view by using the following:
- Click the down arrow in  to select the date.
  - Use any of the arrow keys  to navigate to the date you want.

Theses arrows can help you navigate through the graph.

	– moves to first day
	– moves back seven days
	– moves back one day
	– moves forward one day
	– moves forward seven days
	– moves to last day

- 5 In **End Date**, select the ending date for the information you want to view by using the following:

- Click the down arrow in  to select the date.
- Use any of the arrow keys  to navigate to the date you want.

The graph automatically updates anytime you change the date fields.

- 6 Do any of the following, if applicable.
- Click a warning point on the graph to show or hide the label for the point.
  - Double-click a bar graph when in daily mode to display the hourly bar graph for the selected day.
  - Select **Back**, which appears if you double-click a daily value, to show hourly data for the day. The Back button returns you from the hourly view to the daily view.

## Hourly Graphs

The following is a sample of the hourly data logger information in graph format.

Figure 4.24 Sample Hourly Data Logger Graph

## Data Logger Report

The Data Logger Report displays captured information in an alternative view, displaying actual interval captured readings and consumption values over a defined period of time. The data logger report also indicates any leaks and reverse flow that have taken place during the time frame.

There are two types of data logger reports:

- Daily consumption
- Hourly consumption

Daily Report

The following is a sample daily report for data logging information.

Figure 4.25 Sample Data Logger Report

Producing Different Report Information

Complete the following steps to produce different report information.

- 1 Select  to display a list of available options. See Figure 4.26 on page 4-35.

Figure 4.26 Show Menu Report Options

- 2 Select whatever available options you want to use. See Table 4.1 on Page 4-30 for a descriptions of these options.
- 3 Use the available buttons at the bottom of the screen. See Figure 4.27.

Figure 4.27 Report Buttons

- 4 In **Start Date**, select the starting date for the report information you want to view by using the following:
  - Click the down arrow in  to select the date.
  - Use any of the arrow keys  to navigate to the date you want.
- 5 In **End Date**, select the ending date for the information you want to view by using the following:
  - Click the down arrow in  to select the date.
  - Use any of the arrow keys  to navigate to the date you want.
- 6 Click **Start** to show the new information.

Hourly Report

The following is a sample hourly report for data logging information.

As with the daily reports, you can use the buttons at the bottom of the screen to view information for different dates. See “Producing Different Report Information” on page 4-34.

Using Map View (Optional Feature)

The Map View feature is an optional add-on feature that allows you to visually see the location of the meters on the route or routes you are reading. This is useful if you want to review the reading status of a route at a glance or just the read meters (green dots) and unread meters (red dots). Map View can also help you identify reads where problems have been indicated (yellow dots), such as, Hi/Low failures and E-CoderPLUS features.

In addition to these features, the Map View option offers Global Positioning System (GPS) should you have a compatible GPS receiver.

All these features are only valid with the N\_SIGHT R900 host software and if you are using the N\_SIGHT R900 file format. You must also have geocode information for all of the meters in order to use this feature.

When you have the Map View add-on feature installed, the Map View tab appears in the tab bar as illustrated in Figure 4.28 on page 4-37.

Complete the following steps to use this feature.

- 1 From the Route Selection window, highlight the appropriate route.
- 2 Click the Map View tab.

The Map View window appears showing all the meters on your specific routes.

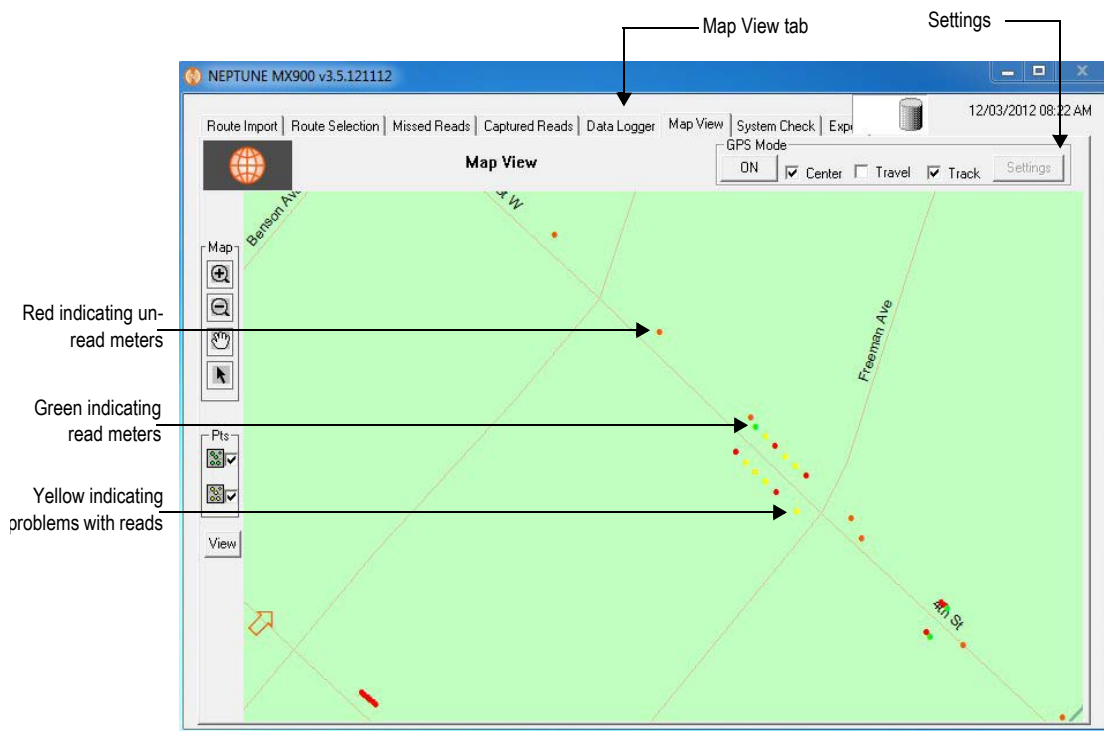

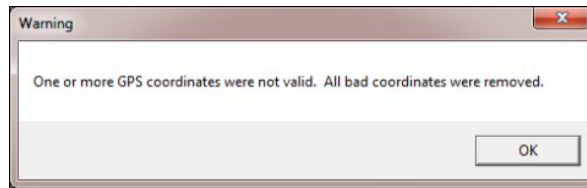

Figure 4.28 Map View Window

If the GPS coordinates are not correct, the following message appears.

**Figure 4.29 Invalid GPS Coordinates**

**A caution message appears if one or more of the GPS coordinates is not correct. The mapping feature is still fully functional. The message indicates that some or all GPS coordinates are invalid. Review and check for correct coordinates in the import file that comes from the CIS billing program.**

3 Use any of the following map tools to enhance your map view.

-  – allows you to zoom in on a given area of the map.
-  – allows you to zoom out on a given area of the map.
-  – pan control allows you to move the map around.
-  – pointer allows you to select an area on the map. Used in conjunction with the View button.
-  – allows you to see a list of MIUs after you select an area on the map with the pointer tool. The MIUs have a captured reads status.

4 Use the Points check boxes to see alternate views of the map.

-  – allows you to suppress the green dots on the map indicating the read meters. This way you view only those meters that are unread or have an unusual event audit indicator associated with the reading.
-  – allows you to suppress the yellow dots on the map indicating the read meters. This option also suppresses the green dots as well.

- 5 To exit this view and return to reading meters, click the Route Selection tab.

## GPS Feature

This feature assumes you have a mobile data collector with GPS capabilities.

The GPS device must be configured within the software. A dialog appears for you to modify the settings for the GPS device.

### Configuring the GPS Device

To configure the GPS device, complete the following steps.

- 1 Open the MRX900 Software.
- 2 Click **MapView**.
- 3 Click **GPS Settings**. See Figure 4.28 on page 4-37.

The following dialog appears.

Figure 4.30 GPS Settings Dialog

- 4 Complete the fields on this dialog to change the GPS settings.
  - **Com Port** — Set to the Com Port on the laptop that the GPS Device is installed in.
  - **Baud Rate** — GPS device manual should state the baud rate at which it operates.
  - **Data Bits** — set to 8.
  - **Parity** — set to None.
  - **Stop Bits** — set to one.

## Using the GPS Modes

The GPS feature operates in three modes:

**Center View** — This view positions the vehicle with the mobile data collector in the center of the window, and the map moves around the vehicle.

**Travel View** — (Default view.) This view moves the vehicle with the mobile data collector around the map on the window, and the map remains stationary. The vehicle is represented by an orange icon on the window. When the vehicle goes off the edge of the map, the Map View shifts and repositions the vehicle in the center of the window.

**Track Feature** — When activated, this feature allows you to track the path and view the trail for the meters that have been read for a route.

Figure 4.31 illustrates the tracking feature with the GPS mode.

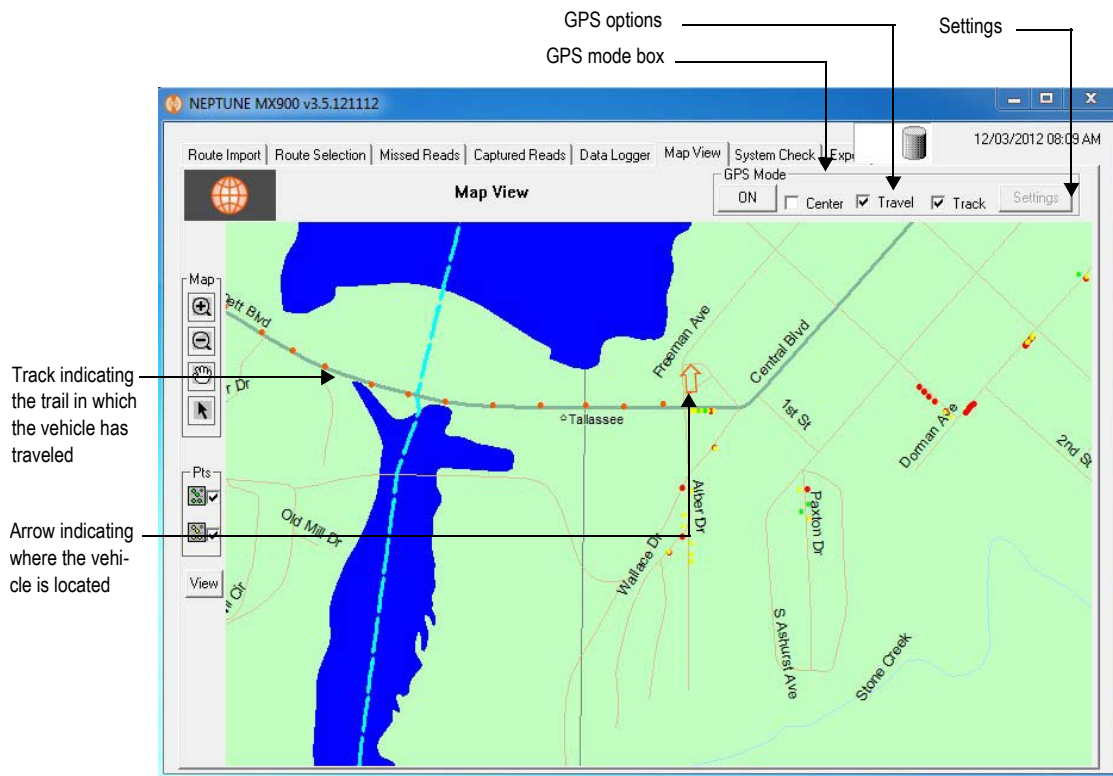

Figure 4.31 GPS Feature

Keep in mind the following when using this feature.

- The track indicating the trail in which the vehicle has traveled does not indicate the tracking trail for the meters that have been read. This is the tracking from the external GPS device that has nothing to do with the meter reading. It shows this tracking when it is activated, whether or not meters are read.
- The arrow indicating where the vehicle is located moves or rotates in the direction in which the vehicle is moving.

If your mobile data collector has GPS capabilities, you can activate the GPS feature on the Map View window by clicking the **ON** button. See Figure 4.32.

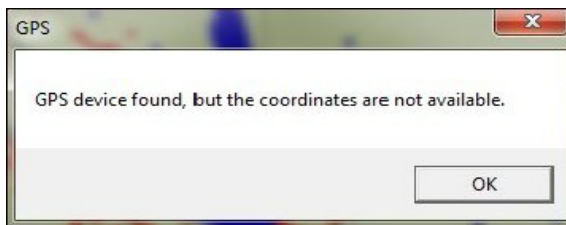

**Figure 4.32 GPS Options**

When the GPS option is activated, you can use the Map View in the following ways.

If some coordinates or all coordinates within the file that are incorrect, the following warning message appears. The GPS functionality still works properly; however, the message lets you know that some or all GPS coordinates within the file are invalid.

**Figure 4.33 No Available GPS Coordinates Message**

---

## Creating an Export File

After you have completed reading all of your routes, you need to create an export file for your utility to upload the read data to the host software.

MX900 keeps archives of the last seven export files. They are located in My Documents\Neptune\MX900\export. They are named with a timestamp like the following example:

20121207091423.exp

(year, month, day, hour, minute, second)

When all routes have been read, use the following procedure to create an export file.

MX900 allows you to select routes to exclude from the export by leaving the **Export** column on the Route Selection window unchecked.

- 1 Press the **Export** tab to display the Export window.
- 2 Press the **Export**  button for one of the following:
  - To store the routes on the USB flash drive
  - To transfer the routes to the host computer using the wireless connection

You cannot be reading routes when creating the export file. If you are in the middle of reading, they must press **Pause Route** to suspend the reading.

---

## Exiting the Software

To exit the software, you press the Exit Route Reading button on the Route Import, Route Selection, and Route Export windows. Pressing this button returns you to the Welcome window.

### From the Route Import and Route Export Windows

Do one of the following:

- Press the **Exit Program**  button.

If you are still reading meters, this button is gray. You can export but you cannot exit route reading unless you stop active reading. Press **Pause**, then you can exit the program.

- Click the Windows Exit  when you are not reading meters.

The MX900 host software closes.

**It is now safe to turn off your computer.** Proceed to “Turning off the Laptop” on page 4-44.

## From the Route Selection Window

- 1 Press the **Exit Route Reading**  button.

If you are still reading meters, this button is gray. Press **Pause**, then you can exit the program.

The Route Export window displays.

- 2 On the Route Export window, press the **Exit Route Reading**

button again.

The Welcome window displays, and then the MX900 host software closes.

**It is now safe to turn off your computer.** Proceed to "Turning off the Laptop".

## Turning off the Laptop

- 1 From the Start menu, click **Shut Down**.
- 2 From the Windows Shut Down window, select **Shut Down**.
- 3 Click **OK**.
- 4 You can now safely remove the USB flash drive. (Refer to "Removing the USB Flash Drive While the Laptop is On" in the section that follows.)

**Improperly removing the USB flash drive while the laptop is ON can cause data corruption on the USB flash drive. Refer to the following section for procedures to safely remove the USB flash drive while the PC is on.**

- 5 Remove the power cable from the vehicle power supply receptacle.
- 6 Drive back to your utility to return the USB flash drive containing the read data, so it can be uploaded to the host software.

## Removing the USB Flash Drive While the Laptop is On

Complete the following steps to safely remove the USB flash drive from the laptop **while it is operating**.

Improperly removing the USB flash drive while the laptop is **ON** can cause data corruption on the USB flash drive.

- 1 Click the USB flash drive  icon located in the lower right corner of the Windows task bar.

The **USB flash drive properties** dialog appears.

- 2 Select the **Socket Status** tab.
- 3 Select the USB flash drive from the list provided.

The list provided shows one socket as being empty. (Refer to “USB Connection” on page 3-3.)

- 4 Click **OK**.

A dialog displays telling you that you can now remove the USB flash drive.

- 5 Remove the USB flash drive from the port on the laptop.

*Notes*

# Chapter 5      Troubleshooting

---

---

## Troubleshooting the MRX920

The troubleshooting section of this guide provides diagnostics procedures for troubleshooting MRX920 problems. It includes both a hardware section and a software section. It also includes recommendations on how to verify that the MRX920 is performing up to specification. Included are tables of possible symptoms, areas of focus, and actions that can be taken to try to resolve problems that could arise with either your MRX920 or MX900 host software.

---

## Troubleshooting Hardware Issues

Use the following table to help identify possible solutions for hardware problems that could occur with the MRX920.

**Table 5.1   Hardware Troubleshooting Table**

Problem	Probable Cause	Things to Check
No power to the unit.	Loose connection at the vehicle plug.	Look for the LED on the power cable.
	Loose connection at the MRX920.	Look for the LED on power cable, but not on the MRX920. Be sure the red arrow on the cable matches the red dot on the MRX920.
	Internal fuse blown on the power cable.	Look for the LED on the power cable.
	Dead battery or fuse in the utility vehicle.	Check the electrical status of the utility vehicle.

**Table 5.1 Hardware Troubleshooting Table**

Problem	Probable Cause	Things to Check
<b>My USB connection isn't working.</b>	Cable is unplugged.	Be sure the USB cable is secure on both the laptop end and the MRX920 end.
	Cable is damaged.	Try any other USB cable.
	Connected through other method.	Check <b>Connection Settings</b> to ensure that you are connecting as you intended (WiFi vs USB).  Look at front of the MRX920. The LEDs labeled <b>WiFi</b> and <b>USB</b> will flash slowly when not connected and will flash quickly on the chosen connection method (WiFi or USB) within the first few seconds of being connected. Flash will continue extremely fast.
<b>Not getting readings.</b>	Unit is not connected correctly.	As long as the <b>Rx</b> LED is changing from on to off, your MRX920 is receiving readings.
	RF antenna is damaged.	Check the antenna for any crimps or damage.
<b>Power is applied, the MX900 host software executes but no route data is available.</b>	USB flash drive not inserted.	Make sure the USB flash drive is properly inserted into an available USB port on your laptop.
	Incompatible data on USB flash drive.	Select the Self-Diagnostics tab to verify that the data on the USB flash drive is compatible.

## Troubleshooting Host Software Issues

Use the following table to help identify possible solutions for host software problems that could occur with the MX900 host software.

**Table 5.2 Host Software Troubleshooting Table**

Problem	Probable Cause	Things to Check
<b>Cannot import route file.</b>	Incorrect file type.	Make sure the file you are importing is an .imp file.
	Corrupt file.	Recreate the file in N_SIGHT R900.
<b>Cannot hear audible tone while meter reading.</b>	Audible tone check box is not selected.	Verify that there is a check mark next to the <b>Audible Tone</b> option in the upper left corner of the route selection screen.
	Volume is not turned up on the laptop.	Verify that the volume on the laptop is turned up and is not on mute.
<b>Unable to view all accounts in Missed and Captured Reads screens.</b>	Filter is turned on.	Verify that the filter in the bottom right corner of the Missed and Captured Reads screen has been removed.
<b>Unable to export all routes.</b>	Export check box is not selected.	In the Route Selection screen be sure to select the check mark next to all routes.
<b>Unable to locate route file.</b>	Route file has been saved to an unknown location.	In the route selection screen click <b>Import Routes</b> in the bottom left corner. Browse to the proper location where the route file has been saved and select it.
<b>Cannot install the software.</b>		Refer to "Host Software Installation" on Page 3-4 in this user's manual.

**Table 5.2 Host Software Troubleshooting Table**

Problem	Probable Cause	Things to Check
<b>My WiFi connection isn't working.</b>	My MX900/RF Test software is connected to the wrong MRX920	Check the <b>MAC</b> address (available under Connection Settings) and compare it to the MAC address on the MRX920's label.
	Connected through the other method Check <b>Connection Settings</b> to ensure you are connecting as you intended (WiFi vs. USB)	Look at front of MRX920. LEDs labeled <b>WiFi</b> and <b>USB</b> will flash slowly when not connected and will flash quickly on the chosen connection method (WiFi or USB) within the first few seconds of being connected. Flash will continue extremely fast.
<b>Cannot press the  in the top right corner</b>	Must be in the paused mode to be able to press the  .	Verify that the software is in the paused mode.

## Appendix A    MRX920 Legacy Operations

---

This appendix is only for users of the former MRX920 which included a laptop and carrying case. This appendix contains the following information.

- “Dimensions and Weight of Legacy Operations” on page A-2
- “Laptop Specifications” on page A-4
- “Power Supply” on page A-4
- “Connecting the MRX920 Receiver to the Laptop” on page A-5
- “Placing the MRX920 in the Vehicle” on page A-5
- “Opening Carrying Case Cover” on page A-8
- “Plugging in the Power Cable” on page A-10
- “Turning the Unit On” on page A-11
- “Adjusting System Settings” on page A-14
- “Using the MRX920” on page A-15
- “Using the Keyboard” on page A-16

Please be aware that the pictures in this manual were taken using the laptop that Neptune supplied. Your specific laptop may be different.

# Dimensions and Weight of Legacy Operations

## Legacy MRX920 Dimensions and Weight

The following table and figure describe the dimensions and weight of the legacy MRX920.

**Table A.1 Dimensions and Weight of Legacy MRX920**

Dimensions	Refer to Figure A.1, measurement in inches and centimeters.
Weight	48.0 lbs (21.77 kg.)

**Figure A.1 Legacy MRX920 Dimensions**

## Legacy MTX950 Dimensions and Weight

The following table and figure describe the dimensions and weight of the legacy MTX950.

**Figure A.2**

**Table A.2 Dimensions and Weight of Legacy MTX950**

Dimensions	Refer to Figure A.2, measurement in inches.
Weight	68.0 lbs

**Figure A.2 Legacy MTX950 Dimensions**

---

# Laptop Specifications

**Table A.3 PC Specifications**

System Type	Windows-Based 1.83 GHz Intel® Pentium 1GB DDR SDRAM
Keyboard	12 Function keys Fully waterproofed design Built-in, solid state mouse Embedded numeric keypad 7 programmable function keys
Display	12.1" TFT XGA Outdoor transmissive DynaVue™ display with Touchscreen VGA Graphics Controller with 2MB VRAM User adjustable contrast and intensity Light sensor which adjusts screen intensity per ambient light Shock/scratch resistant anti-glare plate
Operating System	Windows XP, Service Pack 2 Windows Vista and Window 7 (32-bit and 64-bit)

---

# Power Supply

**Table A.4 Operating Voltage and Current**

Component	Nominal Operating Voltage	Nominal Operating Current	Maximum Operating Current
MRX920 - Laptop Computer turned <b>ON</b>	12V	4 to 7A	10A
MTX950 - Laptop Computer and Transmitter turned <b>ON</b>	12V	8 to 12A	15A

---

## Connecting the MRX920 Receiver to the Laptop

Included with the receiver is a 10-foot DB9 serial cable. Once the software is installed, the cable needs to be connected to the serial port on the MRX920 and the other end connected to the laptop being used. (The laptop must have a DB9 serial connector.)

The laptop must be installed securely in a vehicle mount. This protects the driver and equipment should the vehicle be required to come to an immediate stop. These mounts can be purchased from third-party manufacturers such as RAM Mounting Systems Inc. ([www.ram-mount.com](http://www.ram-mount.com)) and Gamber Johnson ([www.gamberjohnson.com](http://www.gamberjohnson.com)).

This section provides basic instructions for setting up the MRX920 so it can be used to perform mobile meter reading and exchange information with the host computer.

Neptune recommends that you insert the USB flash drive into the laptop after you place the unit in the vehicle.

---

## Placing the MRX920 in the Vehicle

Complete the following steps to set up the MRX920 with your laptop in the vehicle passenger seat.

**Never set up the MRX920 during a lightning storm or under excessively wet conditions.**

- 1 Place the laptop and the MRX920 in the passenger seat securing them with the seat belt.

- 2 Position the retention loops facing the back of the seat.
- 3 Press the blue button on the safety pin and pull the pin out of the seat belt retention loop. See Figure A.3.

**Figure A.3 Removing the Safety Latch**

- 4 Repeat Step 2 to remove the safety pin from the second seat belt retention loop.
- 5 Guide the seat belt through the seat belt retention loops as shown in Figure A.4.

**Figure A.4 Placing Seat Belt in Retention Loop**

- 6 Replace the safety pins in the seat belt retention loops, as shown in Figure A.5.

**Figure A.5 Replacing the Safety Pin**

- 7 Adjust the seat belt so that the unit is secure in the passenger's seat.
- 8 To further secure the unit, slide it against the back of the seat.

---

## Opening Carrying Case Cover

To set up the MRX920 in a vehicle, you must open the top cover by opening the latches on the cover. See Figure A.6.

Complete the following steps to open the latches on the MRX920, shown in the following figure, and open the carrying case top.

- 1 Lift the latch flap and turn it to the left.

The latch releases from the catch on the carrying case top.

**Figure A.6 Latches on MRX920 Carrying Case**

- 2 Repeat step 1 for the other latch.
- 3 Open the cover until it locks in place. See Figure A.7 on page A-9.

**Figure A.7 Opening the Cover**

- 4 If you have not already done so, slide the unit against the back of the seat to further secure it. See Figure A.8.

**Figure A.8 Placing Unit Against Back of Seat**

If the unit interferes with your vision for the passenger window, rest the cover on top of the laptop display to ensure maximum visibility.

---

## Plugging in the Power Cable

Complete the following steps to connect the vehicle power supply power cable to the MRX920 and plug it into the vehicle power supply receptacle.

- 1 Start the vehicle.
- 2 Insert the appropriate end of the vehicle power supply power cable into the connector on the MRX920, as illustrated in Figure A.9.

**Figure A.9 Vehicle Power Supply Power Cable**

- 3 Plug the other end of the power cable into the vehicle power supply receptacle as illustrated in Figure A.10.

**Figure A.10 Vehicle Power Supply Cable Inserted In Car**

---

## Turning the Unit On

Complete the following steps to turn on the MRX920 laptop and start the MX900 host software.

- 1 With the laptop computer facing you, open the display.
- 2 Raise the display to a comfortable viewing position with the keyboard accessible to you.
- 3 Press the power button  located near the center of the back edge of the laptop.

The power button is a soft raised button on the right side of the LED light indicators. See Figure A.11.

Figure A.11 Laptop Keyboard

If the laptop fails to respond to the keys or to the stylus, reboot by pressing and holding down **Ctrl + Alt + Delete** (Figure A.11) for at least 10 seconds. Release the buttons to restart the computer.

For additional information on MRX920 self-diagnostics or keyboard, see the following:

- “Performing Diagnostics,” on page A-23.
- “Using the Keyboard” on page A-16.

## The Laptop

The laptop computer for the MRX920, as shown in Figure A.12, is part of the overall data collector. It communicates with the receiver through a serial link using the software which decodes and records the collected readings by the receiver.

Figure A.12 Laptop in Former MRX920

To ensure the safety of the driver collecting readings, the laptop computer provides an audible indicator option that can be turned on or off as required. For more information, see “Audible Tone Settings,” on Page A 4-2. When turned on, the unit beeps when receiving an MIU signal in the selected route. Other readings are silently inserted into other routes.

**To ensure the driver's safety, use the Beeper function on the MRX920 to monitor meter reading.**

The laptop computer retrieves meter readings from the receiver in real-time and stores them in nonvolatile memory. It checks meter reading completeness against route files that are downloaded from the host software. About one second after a reading is received, the message area and progress bar update the reading status of the route.

### USB Port

The USB port, shown in Figure A.13, is located on the side of the MRX920 laptop unit. Another USB port is located on the rear of the laptop. You can use either slot for meter reading, but do not use both USB ports at the same time. The thumb drive only works with power from the vehicle.

**Figure A.13** USB Port for USB Flash Drive

The MRX920 requires that you use only one USB port for the USB flash drive.

---

## Adjusting System Settings

This section describes several settings you can make to the MRX920 to make it easier and more comfortable to use.

### Contrast

The laptop XGA display is a transmissive color display designed to minimize glare and maximize transmitted light from the backlight, so it has excellent readability in indirect light. The XGA display is easy to read in vehicles. However, to increase or decrease the brightness of the display, perform one of the following actions.

- Press FN + F6 to decrease LCD brightness.
- Press FN + F7 to increase LCD brightness.

### Volume

The volume for the beeper setting can also be controlled:

- Press FN + F8 — decreases the volume.
- Press FN + F9 — increases the volume.
- Press FN + F10 — toggles the volume mute on or off.

You can also adjust the volume with the Windows volume control feature which is located on the taskbar and looks like this .

Adjusting the volume using the function keys produces only a slight change with each press. It may take several presses to increase or decrease the volume to the desired level.

---

## Using the MRX920

When the installation is complete, you are ready to begin using the MRX920 for meter reading. Please refer to Chapter 4 for instructions on operating the MRX920.

### Navigation

All MRX920 functions are performed in one of two ways:

- Using the TAB  key or the arrow     keys to move the focus to the appropriate section.
- Using the provided stylus to touch the selections available on the laptop screen.

**Always use the stylus provided with the laptop to touch the screen. Substituting a hard or sharp item can damage the display.**

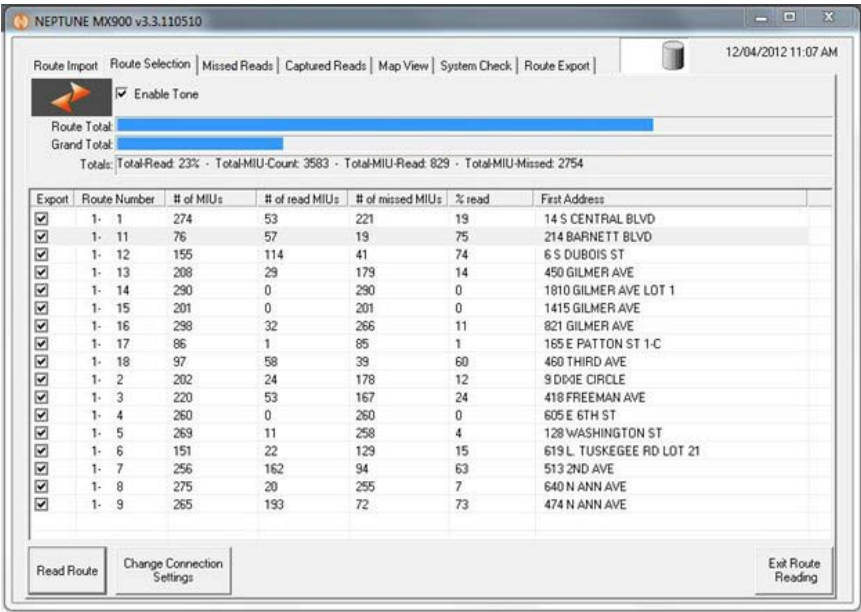

Figure A.14 Navigating Within the Software

For example, Figure A.14 shows the Route Import screen with a route highlighted.

## Using the Keyboard

The previous MRX920 included a laptop with a US 89-key international keyboard. There are twelve function keys, F1-F12, and an embedded numeric keypad. The mouse keys and cursor control directional keys are situated below the keyboard. See Figure A.15 on page A-17.

## Numeric Keypad

The numeric keypad is embedded in the keyboard area. The embedded keypad emulates the numeric keypad typically found on a full-size keyboard. It is arranged like a calculator for applications that require

you to key many numbers or for use with the Calculator in the standard Windows Accessories. Be sure you press **Num Lock** and then press and hold **FN** with the numbers you want to use.

Figure A.15 Numeric Keyboard

## Using the Touchpad

The touchpad is a pointing device that provides all the features of a two-button mouse. Its primary function is to move the cursor around the screen.

Figure A.16 Touchpad

## Your Touchpad

### *Clicking*

First, place your fingers on the keyboard in the normal typing position. The touchpad is easily accessible by moving either your left or right thumb off the space bar and on to the touchpad.

Gently move your thumb across the touchpad in the direction you want the cursor to move. The pad detects the change in pressure and moves the cursor in the corresponding direction.

The touchpad on your MRX920 laptop is electrically sensitive to finger touch. It will not respond if touched by anything other than your fingers, such as a stylus or pencil.

With the touchpad, there is another method of making selections in an MRX920 host software program called double-tapping. This function corresponds to double-clicking with a mouse. Once the cursor has been moved to the object you want to select, lightly double-tap the pressure sensitive touchpad. This double-tapping on the touchpad will select the desired item and prompt the software to perform the related operation.

The left and right buttons located directly below the touchpad are the same in function as those on a two-buttoned mouse. Clicking these buttons makes selections, drags objects, or performs a variety of other functions depending on the software. To select an object, first move the pointer over the object you want to select, and then press the left button one time. The functions of these buttons are software specific.

### *Double-Clicking*

Double-clicking is a common technique for selecting objects or launching programs from icons. Once you have moved the pointer over the object you wish to select, rapidly press the left button two times. This action is commonly referred to as “double-clicking” an object.

***Dragging***

You can also drag items solely using the touchpad.

Move the pointer to the desired location then press down the left button. While still holding down the left button, move the pointer to the desired location. Release the button.

Move the pointer to the desired location. Tap the touchpad twice quickly as if you were double-clicking; however, do not remove your finger after the second tap. Move the cursor to the desired location. Lift your finger to finish dragging.

Adjust the touchpad settings by selecting Settings/Control Panel/Mouse/Buttons. These settings allow you to change the orientation of the touchpad from right-handed to left-handed, and fine-tune the pointer movement and timing of clicks.

**Touchpad Precautions**

If not properly cared for, the touchpad can be easily damaged. Please take note of the following precautions.

**Do not rest heavy objects on the touchpad or the touchpad buttons.**

---

**Using the Transmitter (MTX950 Only)**

The MTX950 transmitter emits the wake-up tone required for Itron electric ERT transmitters.

This section applies to the MTX950 only. This feature is not available for the MRX920.

If you have Itron electric ERT transmitters that require a wake-up tone, you will use the transmitter to emit that tone. To use the transmitter, you must manually initiate it when you begin reading a route. Access to the transmitter and its settings are on the Route Selection window, shown in Figure A.17.

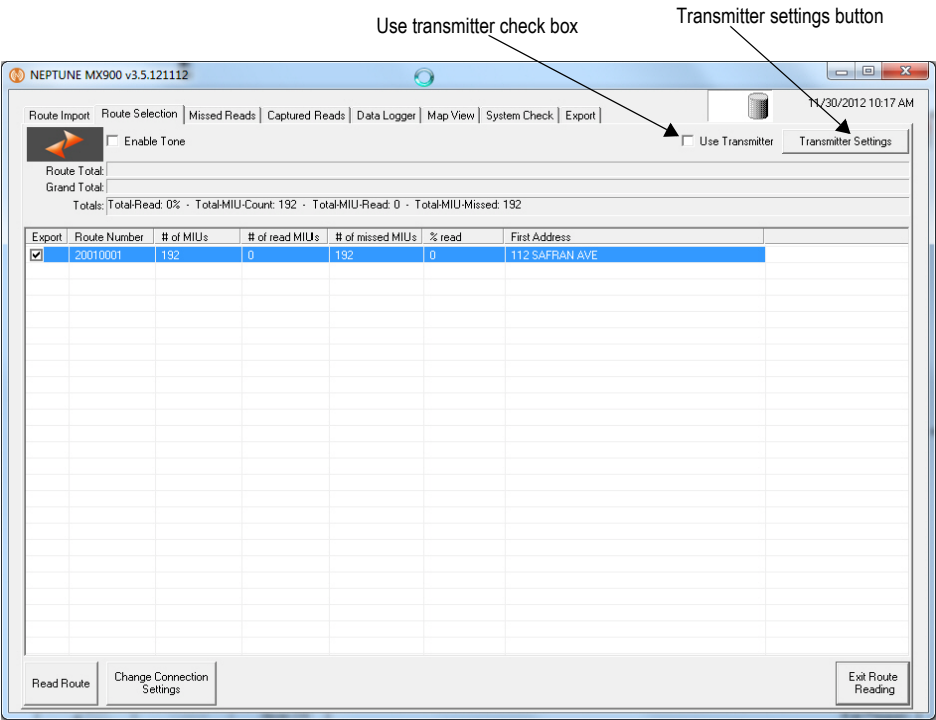

Figure A.17 Using the Transmitter

## Initiating the Transmitter

To initiate the transmitter, select the check box for **Use Transmitter**. A check mark appears in the box.

The Use Transmitter check box is gray if there are no meters requiring a transmitter in the routes loaded into the unit.

You can also change the frequency and tone of the transmitter by following this procedure.

- 1 Access the Route Selection window.

At the top of the window, there is a **Transmitter Settings** button, shown in Figure A.17 on page A-20.

- 2 Click **Transmitter Settings**.

The **Specify Transmitter Data** dialog box appears as illustrated in Figure A.18.

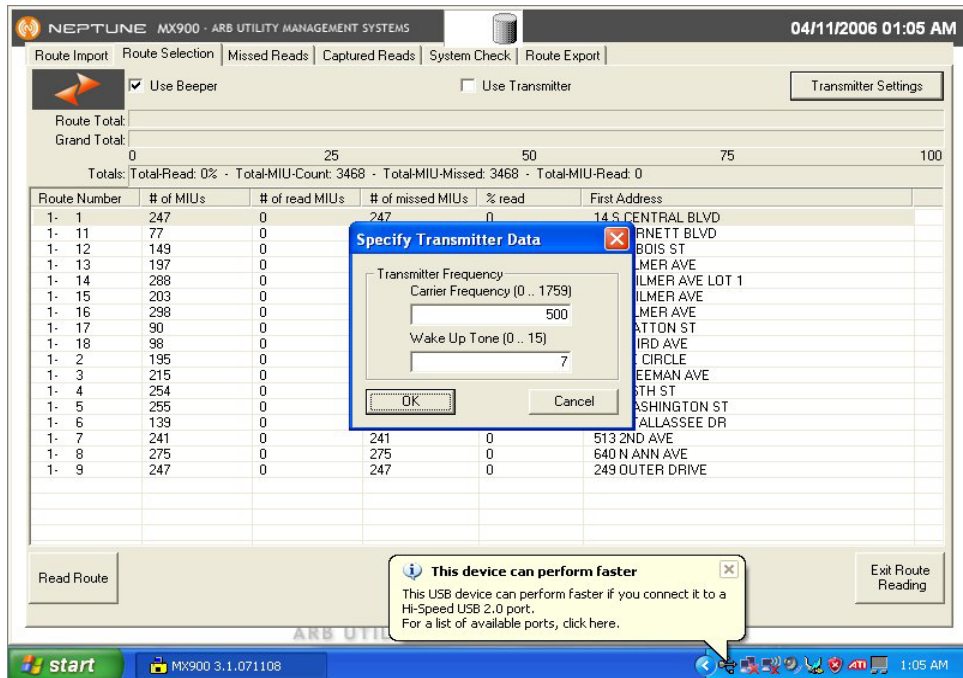

Figure A.18 Specify Transmitter Settings

- 3 Change the settings in the **Carrier Frequency** or **Wake Up Tone** fields as required.
- 4 Select **OK**.

---

# Troubleshooting Legacy Units

Use the following table to help identify possible solutions to problems that could occur.

**Table A.5 Troubleshooting Table**

Problem	Probable Cause	Things to Check
No power to the unit.	Loose connection at vehicle power supply receptacle.	Make sure you can hear the unit's internal fans.
	Loose connection between MRX920 and power cable.	
	Bad power cable.	Check the continuity of the cable with ohm meter.
	Dead battery or fuse in utility vehicle.	Check the electrical status of the utility vehicle.
Power is applied, the MX900 host software executes, but no route data is available.	No power to vehicle power supply receptacle.	Insert lighter and check to see if it heats up.
	USB flash drive not inserted.	Make sure USB flash drive is properly inserted.
Power is on but the screen is blank or unreadable.	Incompatible data on USB flash drive. See "Performing Diagnostics," on Page A -23.	Select Self-Diagnostics tab to verify that the data on the USB flash drive is compatible.
	Intensity settings too high or too low.	Check Intensity settings.
The software appears to be working but does not collect data.	No power to PC.	Make sure I-O (On/Off) key has been pressed.
	Antenna not connected properly or not installed.	Check antenna connection.
	Broken antenna cable.	

## Performing Diagnostics

The MX900 host software performs diagnostics when you access the System Check screen. This allows you to check the status of the system components.

## Displaying the Software Self Diagnostics

Follow this procedure to display the software System Check screen.

- 1 Press the **Start** button from the software Welcome screen.

The Route Import screen (Figure A.19) appears.

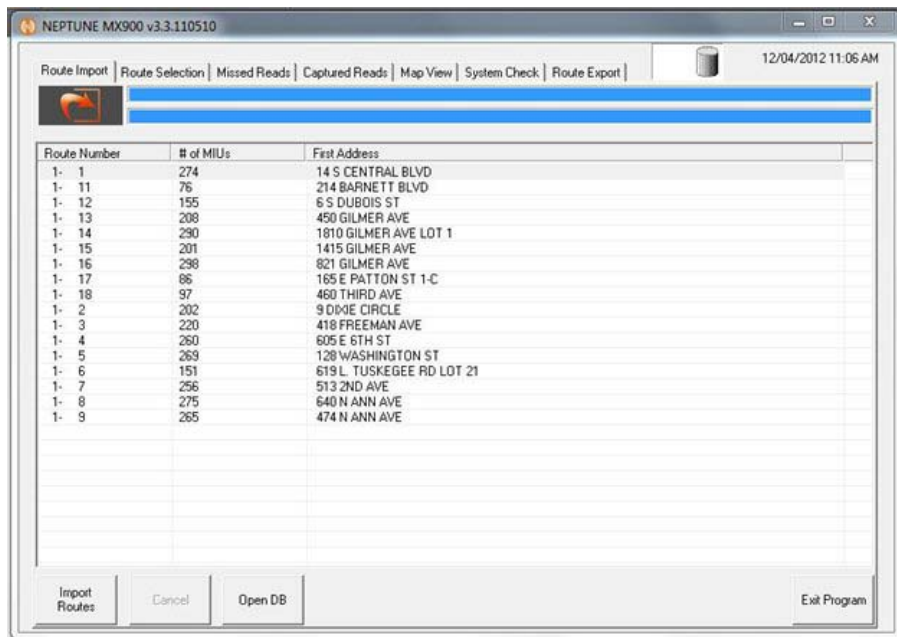

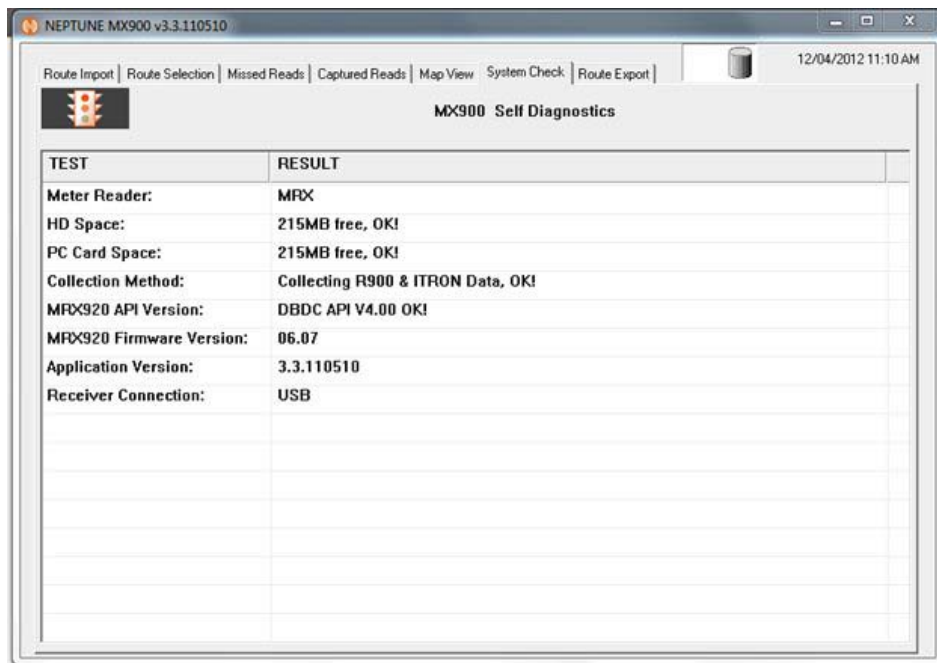

Figure A.19 Route Import Screen

- 2 Press the **System Check** tab to display the System Check screen as shown in Figure A.20.

**Figure A.20 MX900 System Check Screen**

The MX900 host software System Check screen contains the following fields for meter-reading components:

- Meter Reader — name of the meter reader as obtained from USB flash drive files
- HD Space — verification that the laptop has sufficient hard disk space
- USB Flash Drive Space — the amount of available free space on the memory card
- Collection Method — identification of the meter reading data collection method being used
- DBDC API Version — software version installed on the MRX920
- DBDC Firm Ware Version — firmware version on the DMR board

- Software Version — identification of the version number of the MX900 host software
  - Temperature — notifies the user whether or not the temperature of the unit is okay for operation
- 3 To exit the MX900 host software System Check screen, select another screen from the tabs.

---

## Importing Route Data

### If Route Data File is Not Found

If the USB flash drive is not inserted in the USB port when the software is started, the following dialog appears allowing you to select the location for the import file. See Figure A.21.

Figure A.21 Import File Location Dialog

## Selecting the Import File

To select and load the import file, do the following:

- 1 On the Open file dialog, click **G:** (or the appropriate drive letter) to verify that the **roadmaps.imp** file is located on the USB flash drive.
- 2 Select **roadmaps.imp** and click **Open**.

If the **roadmaps.imp** file is not found, go back to the host computer and be sure the file is loaded on the USB flash drive. Once the file is loaded on the USB flash drive, restart the laptop.

## If the USB Flash Drive is Not Recognized

- 1 Go to **My Computer** or **Windows Explorer** to verify that the USB flash drive is recognized by the laptop.

If the USB flash drive is recognized, My Computer or Windows Explorer will show a drive letter for the USB flash drive, usually G:.

If the USB flash drive is not recognized by the laptop, try rebooting your laptop.

- 2 Click **G:** (or the appropriate drive letter) to verify that the **roadmaps.imp** file is located on the USB flash drive.
- 3 If the **roadmaps.imp** file is found, shut down the laptop as described in “Turning off the Laptop,” on Page A 4-44.
- 4 Remove the flash drive.
- 5 Reboot the laptop and insert the USB flash drive. Then repeat steps 1 to 3 to verify that USB flash drive is recognized by the laptop and the import file is found on the USB flash drive.

## Glossary

---

<b>central processing unit</b>	Often abbreviated as CPU, it is the brain of the computer. Sometimes referred to as the processor or central processor, the CPU is where most calculations take place. In terms of computing power, the CPU is the most important element of a computer system.
<b>default setting</b>	A computer term that is similar in meaning to factory setting. The default setting is one that the MX900 host software automatically applies to an item. For example, the default setting for Beeper On/Off mode is Beeper Off. The beeper is always off unless the meter reader changes the beeper setting.
<b>direction keys</b>	Special keys on the laptop keyboard that allow you to move up or down a list of items. The direction keys, the Up (F5) and Down (F4) keys are indicated by arrow key icons on the laptop display.
<b>display</b>	The top part of the laptop computer where selections and information about routes and accounts are shown.
<b>download</b>	The process of sending readings and route information from the Host Computer to the USB flash drive used for readings.
<b>function key</b>	Special key on the laptop keyboard that allows you to perform tasks quickly. The function keys used by the software are on the top row of the laptop computer (PF1 - PF7) and in the two rows of F keys (F1 - F17). PF keys and F keys have an equivalent function in the MX900 host software.

<b>highlighted</b>	Describes an item that is selected. When you select an item using the direction keys, the software lets you know that it has been selected by accenting the item in negative image.
<b>host computer</b>	A computer that is accessed by a user working on another PC or workstation; for example, the host computer contains all the Mobile, RouteMAPS, or EZRouteMAPS data to which the billing computer and other PC operators can connect.
<b>IP</b>	<p>Internet Protocol. It is the communication protocol for communication between computers on the Internet.</p> <p>TCP/IP defines how electronic devices (like computers) should be connected to the Internet, and how data should be transmitted between them.</p>
<b>message area</b>	A portion of a screen that displays a message.
<b>meter number</b>	The number by which a utility identifies a meter.
<b>MHz</b>	Abbreviation for megahertz. One MHz represents one million cycles per second.
<b>microprocessor</b>	A chip that contains a central processing unit. At the heart of all personal computers and most workstations is a microprocessor. Microprocessors also control the logic of almost all digital devices.
<b>MIU ID</b>	An abbreviation for <i><b>M</b>eter <b>I</b>nterface <b>U</b>nit Identifier</i> , which is a discrete number used to identify a specific meter interface unit.
<b>operating system</b>	A critical program that runs on a computer that is used to run other programs. Operating systems perform basic tasks, such as, recognizing input from the keyboard, sending output to the display screen, keeping track of files and directories, and controlling any peripheral devices such as disk drives, ports, and printers.
<b>PC</b>	An abbreviation for personal computer, in the case of MRX920, this refers to the laptop.

<b>personal computer</b>	A general-purpose, single-user microcomputer designed to be operated by one person at a time. All are based on the microprocessor technology that enables manufacturers to put an entire central processing unit on one chip.
<b>screen</b>	<p>The graphic portion of a display. The MX900 host software screens show information in three different areas to present the information shown on the display:</p> <ul style="list-style-type: none"><li>- a meter reading and loading indicator area with a graphic progress bar and pulsing reading indicator</li><li>- a message and information display area</li><li>- an active function key display bar</li></ul>
<b>select</b>	To choose a route or address by positioning a highlighted area using function keys. The highlighted item is selected.
<b>TCP</b>	<p>Transmission Control Protocol. It is the communication protocol for communication between computers on the Internet.</p> <p>TCP/IP defines how electronic devices (like computers) should be connected to the Internet, and how data should be transmitted between them.</p>
<b>upload</b>	The process of sending readings and route data from the MRX920 to the host computer via WiFi/USB/serial port connection.
<b>USB flash drive</b>	A small device that allows you to add memory, mass storage, and other capabilities to portable computers. USB flash drives are sometimes called thumb drives.
<b>Windows</b>	The operating system that supports 32-bit applications. Versions of Windows supported by the MRX920 are Windows XP, Windows Vista, and Windows 7. See "Hardware Requirements," on Page 2-3.
